AUTOMATIC REGULATION OF THE AIR CONDITIONING

The automatic regulation of the air conditioning in the passenger compartment is controlled by various sensors (exterior temperature, interior temperature, sunshine), preventing the need for you to change your reference settings other than the temperature displayed. In addition, a humidity sensor anticipates the formation of condensation in the vehicle during its use.

Advice on operation

To obtain even ventilation, avoid closing the air diffuser grille 10. In hot weather, to obtain increased ventilation, you can close the air diffuser grille 10 and use only the vents 1 and 6.

For even air distribution, take care not to obstruct the exterior air intake grille located at the bottom of the windscreen, the vents, the air outlets under the front seats and the air extractor located behind the flaps in the boot.

Do not block sensors 2 and 9.

When towing a trailer with a considerable load and when the exterior temperature is very high, the air conditioning may be cut off temporarily if the engine cooling makes this necessary.

Pull the blinds on the rear door windows and the rear screen.

1. Centre panel vents.
2. Temperature and humidity sensor.
3. Adjustment of the glove box air flow (see section "Interior layout").
4. Air outlet to passenger footwells.
5. Two ventilation vents at the rear at the base of the centre console between the passengers.
6. Side vents.
7. Front windows de-icing or demisting vents.
8. Windscreen de-icing or demisting vents.
9. Sunshine sensor.
10. Air diffuser grille.

Air diffuser

The air diffuser grille, located at the top of the centre console, significantly improves distribution and flow and prevents air currents, while maintaining an optimum temperature inside the passenger compartment.
