**Creo Parametric 5.0 Tutorial** Roger Toogood, 2018 The eleven lessons in this tutorial introduce you to the design capabilities of Creo Parametric 5 0 The tutorial covers the major concepts and frequently used commands required to advance from a novice to an intermediate user level Major topics include part and assembly creation and creation of engineering drawings Also illustrated are the major functions that make Creo Parametric a parametric solid modeler Although the commands are presented in a click by click manner an effort has been made in addition to showing illustrating the command usage to explain why certain commands are being used and the relation of feature selection and construction

to the overall part design philosophy Simply knowing where commands can be found is only half the battle As is pointed out numerous times in the text creating useful and effective models of parts and assemblies requires advance planning and forethought Moreover since error recovery is an important skill considerable time is spent exploring the created models In fact some errors are intentionally induced so that users will become comfortable with the debugging phase of model creation At the end of each lesson is a short quiz reviewing the new topics covered in that chapter Following the quiz are several simple exercise parts that can be created using new commands taught in that lesson In addition to these an ongoing project throughout the book is also included This project consists of several parts that are introduced with the early lessons and finally assembled at the end
