Interdisciplinary Lively Application Projects David C. Arney, 1997-12-31 The ILAPs provide supplemental classroom resource materials in the form of eight project handouts that you can use as student homework assignments They require students to use scientific and quantitative reasoning mathematical modeling symbolic manipulation skills and computational tools to solve and analyze scenarios issues and questions involving one or more disciplines The prerequisite skills for the eight projects presented in the book range from freshman level algebra trigonometry and precalculus through calculus elementary and intermediate differential equations and discrete mathematics to advanced calculus and partial differential equations Integrating Research on the Graphical Representation of Functions Thomas A. Romberg, Elizabeth Fennema, Thomas P. Carpenter, 2012-10-12 This volume focuses on the important mathematical idea of functions that with the technology of computers and calculators can be dynamically represented in ways that have not been possible previously The book s editors contend that as result of recent technological developments combined with the integrated knowledge

available from research on teaching instruction students thinking and assessment curriculum developers researchers and teacher educators are faced with an unprecedented opportunity for making dramatic changes The book presents content considerations that occur when the mathematics of graphs and functions relate to curriculum It also examines content in a carefully considered integration of research that conveys where the field stands and where it might go Drawing heavily on their own work the chapter authors reconceptualize research in their specific areas so that this knowledge is integrated with the others strands This model for synthesizing research can serve as a paradigm for how research in mathematics education can and probably should proceed

Precalculus Todd Swanson, Janet Andersen, 2001 PRECALCULUS A STUDY OF FUNCTIONS AND THEIR APPLICATIONS is an innovative precalculus text that incorporates multiple representations of functions real world applications the use of technology in the form of graphing calculators and projects Written in a conversational tone it incorporates reading questions throughout the text to guide the students in their reading Linear exponential logarithmic periodic and power functions are introduced early in the text allowing the rest of the text to be organized around mathematical concepts rather than types of functions Drawing on their experience working on their National Science Foundation grant funded PROJECTS FOR PRECALCULUS the authors incorporated input from many instructors who piloted the materials to create PRECALCULUS A STUDY OF FUNCTIONS AND THEIR APPLICATIONS
