*Rural Electrification* Hisham Zerriffi, 2010-11-08 For those in developed nations suddenly being without electricity is a disaster power cuts have us fretting over the food stored in the freezer and even a few hours without lights televisions or air conditioning is an ordeal However for an estimated 1.6 billion people worldwide the absence of electricity is their daily experience An untold number of others live with electricity that is erratic and of poor quality How can electric power be brought into their lives when the centralized utility models that have evolved in developed nations are not an economically viable option Poor rural communities in developing nations cannot simply be plugged in to a grid Small scale Distributed Generation DG ranging from individual solar home systems to village level grids run off diesel generators could provide the answer and this book compares around 20 DG enterprises and projects in Brazil Cambodia and China each of which is considered to be a business model for distributed rural electrification While large centralized power projects often rely on big subsidies this study shows that privately run and localized solutions can be both self sustaining and replicable Its three sections provide a general introduction to the issue of electrification and rural development set out the details of the case studies and compare the models involved and discuss the important thematic issues of equity access to capital and cost recovery Hisham Zerriffi shows that in each case it is not simply a matter of matching a particular technology to a particular need Numerous institutional factors come into play including the regulatory regime access to financial services and government utility support or opposition to the DG alternative Despite this in many countries the question is not whether DG has a role to play Rather it is a question of how it will play a role

*Rural Electrification Through Decentralised Off-grid Systems in Developing Countries* Subhes Bhattacharyya, 2012-11-06 More than 1.3 billion people worldwide lack access to electricity Although extension of the electricity grid remains the preferred mode of electrification off grid electrification can offer a solution to such cases Rural Electrification through Decentralised Off grid Systems in Developing Countries provides a review of rural electrification experiences with an emphasis on off grid electrification and presents business related aspects including participatory arrangements financing and regulatory governance Organized in three parts Rural Electrification through Decentralised Off grid Systems in Developing Countries provides comprehensive coverage and state of the art reviews which appraise the reader of the latest trend in the thinking The first part presents the background information on electricity access discusses the developmental implications of lack of electricity infrastructure and provides a review of alternative off grid technologies The second part presents a review of experiences from various regions South Asia China Africa South East Asia and South America Finally the third part deals with business dimensions and covers participatory business models funding challenges for electrification and regulatory and governance issues Based on the research carried out under the EPSRC DfID funded research grant for off grid electrification in South Asia Rural Electrification through Decentralised Off grid Systems in Developing Countries provides a multi disciplinary perspective of the rural electrification

**Global Energy** Paul Ekins, Michael J. Bradshaw, Jim Watson, 2015 Energy and access to energy are essential to human life civilisation and development A number of energy issues including energy security energy prices and the polluting emissions for energy use now have high prominence on global agendas of policy and diplomacy In addressing these and other global energy issues the purpose of this book is to lay out the broad global energy landscape exploring how these issues might develop in coming decades and the implications of such developments for energy policy There are great uncertainties which will be identified in respect of some of these issues but many of the defining characteristics of the landscape are clear and the energy policies of all countries will need to be broadly consistent with these if they are to be feasible and achieve their objectives The book therefore provides information about and analysis of energy and related resources and the technologies that have been and are being developed to exploit them that is essential to understanding how the global energy system is developing and how it might develop in the future But its main focus is the critical economic social political and cultural issues that will determine how energy systems will develop and which technologies are deployed why by whom and who will benefit from them The book has three Parts Part I sets out the current global context for energy system developments outlining the essential trends of global energy supply and demand and atmospheric emissions from the past and going forward and their driving forces Part II explores the options and choices covering both energy demand and energy supply facing national and international policymakers as they confront the challenges of the global context outlined in Part I Part III of the book brings together the discussion in Parts I and II with consideration of possible global energy and environmental futures and of the energy policy choices which will determine which future actually comes to pass

**Renewables** Michael Aklin,Johannes Urpelainen,2018-03-23 A comprehensive political analysis of the rapid growth in renewable wind and solar power mapping an energy transition through theory case studies and policy Wind and solar are the most dynamic components of the global power sector How did this happen After the 1973 oil crisis the limitations of an energy system based on fossil fuels created an urgent need to experiment with alternatives and some pioneering governments reaped political gains by investing heavily in alternative energy such as wind or solar power Public policy enabled growth over time and economies of scale brought down costs dramatically In this book Michael Aklin and Johannes Urpelainen offer a comprehensive political analysis of the rapid growth in renewable wind and solar power mapping an energy transition through theory case studies and policy analysis Aklin and Urpelainen argue that because the fossil fuel energy system and political support for it are so entrenched only an external

shock an abrupt rise in oil prices or a nuclear power accident for example allows renewable energy to grow They analyze the key factors that enable renewable energy to withstand political backlash andt they draw on this analysis to explain and predict the development of renewable energy in different countries over time They examine the pioneering efforts in the United States Germany and Denmark after the 1973 oil crisis and other shocks explain why the United States surrendered its leadership role in renewable energy and trace the recent rapid growth of modern renewables in electricity generation describing among other things the return of wind and solar to the United States Finally they apply the lessons of their analysis to contemporary energy policy issues
