◇ Adjusting Clutch

The clutch inner wire stretches as the bike's mileage increases, and the clutch facings also wear more or less, with a consequent increase of the amount of play in the clutch cable. It should be adjusted periodically.

Adjust the clutch with both the clutch cable adjuster and release adjusting screw. Note that if you try to adjust the clutch with only one of them, various troubles such as incomplete clutching, clutch slipping, etc. will occur.

The play of the clutch should be 4 mm (0.16 in) as shown in Fig. 28.
