

Fig. 48.1

Fig. 48.2

WARNING:

Failure to follow these tyre instructions may cause serious accidents:

- Off road knobby tyres are not suitable for prolonged road use for highway application.
- Max speed category 80 Mph = 130 km/h. In countries allowing this type of tyre for highway use recommended speed max 56 Mph = 90 km/h.
- Mount tyre and rim with directional arrow on sidewall correctly oriented to wheel rotation.
- Remove any foreign material from inside the tyre casing.
- Clean and lubricate tyre beads for proper seating on rim. **THIS IS A MUST.**
- Use only approved tyre installation tools for mounting.
- Do not damage the tyre bead area when mounting.
- Inflate tyre with core in valve stem to 42 psi = 2.9 bar maximum. Stand back, tyre bead should move into bead seat of rim. Never stand over or in front of the tyre when inflating.
- Inspect tyre bead location to make sure it is seated concentricly. If not, deflate, ad-

Fitting

1. Fit the rim band, making sure that it is correctly positioned and covers all spoke nipples.
2. Pull one side of the tyre in place on the wheel rim. This will be facilitated if the beading is coated with a soap solution.
3. Inflate the tube partially so that when held from the hand it forms an ellipse with two folds, one at top and one at bottom. Powder the inside of the tyre with talc and the tube as well, if necessary.
4. Fit the valve in the rim and push the tube into the tyre. Check that the valve is at right angle to the rim.
5. Push the tyre over the rim of the wheel by hand. Begin at the side opposite the valve and finish off at the valve position with the aid of tyre irons.
6. Push the valve inwards and check that the hose is not pinched against the rim.
7. Inflate the tyre and check that the marking on the tyre is concentric with the wheel rim.

Framenumber

The framenumber of the bike is placed on the steering-head.

Engine number

Engine number is located on top of the crankcase.

just, lubricate bead and reinflate – when bead is correctly seated, reduce pressure to motorcycle manufacturer's recommended inflation.

- Install collar nut on valve stem, put cap on valve stem back collar nut up into cap to act as a lock nut.
- Valve stem should always point directly toward the wheel center. If not, immediately deflate and readjust the tyre and tube location on the rim so the tube valve stem is correctly positioned.
- Do not use screw drivers, chisels or other sharp radius pry levers for mounting tyres. Do not rush or brute force the installation. Broken bead wires are an injury of incorrect installation.
- For safety and tyre wear life, always check tyre pressure before riding. Use an accurate low pressure gauge. Very high pressure may damage rim, reduce contact patch size on ground and affects riding comfort.
- Underinflation causes poor handling and may damage rims and tubes, increases breakaway under power in corners, increase rolling resistance and may cause breaks in the tyre textile carcass. Excessive casing flexing generates high heat within the tyre and may cause damage to the rubber physical properties.
