Graph Transformations Hartmut Ehrig, Arend Rensink, Grzegorz Rozenberg, Andy Schürr, 2010-09-21 Graphs are among the simplest and most universal models for a variety of systems not just in computer science but throughout engineering and the life sciences. When systems evolve, we are interested in the way they change to predict, support, or react to their evolution. Graph transformation combines the idea of graphs as a universal modelling paradigm with a rule-based approach to specify their evolution. The area is concerned with both the theory of graph transformation and their application to a variety of domains. The biannual International Conferences on Graph Transformation aim at bringing together researchers and practitioners interested in the foundations and applications of graph transformation. The fifth conference ICGT 2010 was held at the University of Twente, The Netherlands, in September-October 2010, along with several satellite events. It continued the line of conferences previously held in Barcelona, Spain, in 2002; Rome, Italy, in 2004; Natal, Brazil, in 2006; and Leicester, UK, in 2008, as well as a series of six International Workshops on Graph Transformation with Applications in Computer Science from 1978 to 1998. Also, ICGT alternates with the workshop series on Application of Graph Transformation with Industrial Relevance (AGTIVE). The conference was held under the auspices of EATCS and EASST.

The 14 papers presented in this volume were carefully reviewed and selected from 33 submissions. They were organized in topical sections named foundations, tools, and algorithms, queries, and applications. The book also contains one keynote paper in full paper length. The book is dedicated to Hartmut Ehrig, one of the fathers and most productive members of the Graph Transformation community, who passed away in 2016. An obituary is included in the front matter of the volume. *Graph Transformations* Andrea Corradini, Hartmut Ehrig, Ugo Montanari, Leila Ribeiro, Grzegorz Rozenberg, 2006-09-21 This book constitutes the refereed proceedings of the Third International Conference on Graph Transformations (ICGT 2006). The book presents 28 revised full papers together with 3 invited lectures. All current aspects in graph drawing are addressed, including graph theory and graph algorithms, theoretic and semantic aspects, modeling, tool issues, and more. Also included are accounts of a tutorial on foundations and applications of graph transformations and of ICGT Conference satellite events. **Graph**
