The simplest way to define density dependence (eq 1) is to change the value of density depending on the density itself, resulting in the *Density-Dependancy* (D-DEP) condition. The main difference between DEP and density-dependancy is that the latter leads to the *Fluctuation* condition, i.e., the depth of fluctuations. The latter value is the same as $\sqrt{\text{var}(x)}$ of eq 1, which has provided the *variance* condition. DEP is preferred for many problems with only one variable and usually the differential equation associated with eq 1 is not rigorous enough. Furthermore, it differs from the main difference with respect to the density-dependancy condition of eq 1, which is the *Fluctuation* condition of eq 1, which is the *variance* condition of eq 1. The variance condition is the *variance* condition of eq 1, which is the *variance* condition of eq 1.

Rescuing Econometrics Duo Qin,2023-12-01 Haavelmo s 1944 monograph *The Probability Approach in Econometrics* is widely acclaimed as the manifesto of econometrics This book challenges Haavelmo s probability approach shows how its use is delivering defective and inefficient results and argues for a paradigm shift in econometrics towards a full embrace of machine learning with its attendant benefits Machine learning has only come into existence over recent decades whereas the universally accepted and current form of econometrics has developed over the past century A comparison between the two is however striking The practical achievements of machine learning significantly outshine those of econometrics confirming the presence of widespread inefficiencies in current econometric research The relative efficiency of machine learning is based on its theoretical foundation and particularly on the notion of Probably Approximately Correct PAC learning Careful examination reveals that PAC learning theory delivers the goals of applied economic modelling research far better than Haavelmo s probability approach Econometrics should therefore renounce its outdated foundation and rebuild itself upon PAC learning theory so as to unleash its pent up research potential The book is catered for applied economists econometricians economists specialising in the history and methodology of economics advanced students philosophers of social sciences
