

Homework Set 2, due Feb. 2, 2020

HW.1. The H^+ particle is an unstable baryon, composed of u, d and a quark, but you don't need to know that to solve this problem. The H^+ used to form H has spin $1/2$ and is electrically neutral. Consider decay of the H^+ particle into a proton and a pion π^+ . (a quark particle with charge $+2/3$).

- (a) Find the direction of spin components of the H^+ for z -direction (i.e. it can be along $\pm z$ or $\pm x$ or $\pm y$ directions). Using conservation of angular momentum, draw the four possible final states for decay to the π^+ or π^- directions. (b) proton going up along $+z$ with spin up, pion going down, π^-, \downarrow .

(c) Compute the probability for decay along a direction \hat{n} relative to the initial spin of the H^+ . Express your answer (the observed rate) depends on \hat{n} . Show that yields parity conservation?

HW.2 Chapter 5, Problems 5.1 to Solution 5, Neglecting. (Please refer to HW.1, see.)

HW.3 Chapter 5, Problems 5.2 to Solution 5, Neglecting. (2000 1.1)

HW.4 Chapter 5, Problems 5.3 to Solution 5, Neglecting.

HW.5 Chapter 5, Problems 5.4 to Solution 5, Neglecting.

HW.6 Chapter 5, Problems 5.5 to Solution 5, Neglecting.

HW.7 Chapter 5, Problems 5.6 to Solution 5, Neglecting. (2000 1.1)

HW.8 Chapter 5, Problems 5.7 to Solution 5, Neglecting.

If you have time, take a look at HW.9 and HW.10, but you don't need to solve them in. If you want to see a more challenging problem, consider trying HW.11.

(Note: QM10-1 to Solution Problem 1.1, I suggest to keep it as a bonus problem.)

Inorganic Reaction Mechanisms J Burgess, 2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry

Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume

Synthesis of Power Distribution to Manage Signal Integrity in

Mixed-Signal ICs Balsha R. Stanisic, Rob A. Rutenbar, L. Richard Carley, 2012-12-06 In the early days of VLSI the design of the power distribution for an integrated circuit was rather simple Power distribution the design of the geometric topology for the network of wires that connect the various power supplies the widths of the individual segments for each of these wires the number and location of the power I/O pins around the periphery of the chip was simple because the chips were simpler Few available wiring layers forced floorplans that allowed simple planar non overlapping power networks Lower speeds and circuit density made the choice of the wire widths easier we made them just fat enough to avoid resistive voltage drops due to switching currents in the supply network And we just didn't need enormous numbers of power and ground pins on the package for the chips to work It's not so simple any more Increased integration has forced us to focus on reliability concerns such as metal electromigration which affects wire sizing decisions in the power network Extra metal layers have allowed more flexibility in the topological layout of the power networks

Cryopreservation and Freeze-Drying Protocols John G. Day,Mark R. McLellan,2008-02-02 The storage of biological material for regular or future use is a fundamental requirement in many biological and medical sciences Cryopreservation and freeze drying are the preferred techniques for achieving long term storage and have been applied to a diverse range of

biological materials Though the basis for many methodologies is common laboratories frequently lack expertise with the correct storage procedures so that many apply outdated or inappropriate protocols for storing their samples or cultures Cryopreservation and Freeze Drying Protocols is a compilation of the many and varied methodologies that have been developed in expert laboratories The protocols are reproducible robust and in most instances have been transferred quite successfully to other laboratories Our intended readers are those proposing to establish or improve biostorage systems in their own laboratories or units whether concerned with culture collections animal husbandry aquaculture or human fertilization programs Because the emphasis of Cryopreservation and Freeze Drying Protocols is on methodology it is our intention to provide readers with the tools to make practical progress without reference to other sources Each chapter deals with an organelle cell or tissue type a short introduction on the status of its biostorage development is followed by a detailed description of the materials required and a methodological protocol to be followed with explanatory notes This is very much a first edition we hope and trust that future editions will contain cryopreservation and freeze drying protocols for cells tissues and organs that are at present still recalcitrant to successful preservation

Collected Papers Robert J. Aumann, 2000

Robert Aumann's career in game theory has spanned over research from his doctoral dissertation in 1956 to papers as recent as January 1995 Threaded through all of Aumann's work symbolized in his thesis on knots is the study of relationships between different ideas between different phenomena and between ideas and phenomena When you look closely at one scientific idea writes Aumann you find it hitched to all others It is these hitches that I have tried to study The papers are organized in several categories general knot theory decision theory utility and subjective probability strategic games coalitional games and mathematical methods Aumann has written an introduction to each of these groups that briefly describes the content and background of each paper including the motivation and the research process and relates it to other work in the collection and to work by others There is also a citation index that allows readers to trace the considerable body of literature which cites Aumann's own work

Solution Thermodynamics and its Application to Aqueous Solutions Yoshikata Koga, 2007-11-12 As the title suggests we introduce a novel differential approach to solution thermodynamics and use it for the study of aqueous solutions We evaluate the quantities of higher order derivative than the normal thermodynamic functions We allow these higher derivative data speak for themselves without resorting to any model system We thus elucidate the molecular processes in solution referred to in this book mixing scheme to the depth equal to if not deeper than that gained by spectroscopic and other methods We show that there are three composition regions in aqueous solutions of non electrolytes each of which has a qualitatively distinct mixing scheme The boundary between the adjacent regions is associated with an anomaly in the third derivatives of G The loci of the anomalies in the temperature composition field form the line sometimes referred as Koga line We then take advantage of the anomaly of a third derivative quantity of 1 propanol in the ternary aqueous solution 1 propanol sample

species H₂O We use its induced change as a probe of the effect of a sample species on H₂O In this way we clarified what a hydrophobe or a hydrophile and in turn an amphiphile does to H₂O We also apply the same methodology to ions that have been ranked by the Hofmeister series We show that the kosmotropes salting out or stabilizing agents are either hydrophobes or hydration centres and that chaotropes salting in or destabilizing agents are hydrophiles A new differential approach to solution thermodynamics A particularly clear elucidation of the mixing schemes in aqueous solutions A clear understandings on the effects of hydrophobes hydrophiles and amphiphiles to H₂O A clear understandings on the effects of ions on H₂O in relation to the Hofmeister effect A new differential approach to studies in multi component aqueous solutions
