Salmon, Yariv Tsfati, 2014-01-03 Since its original articulation in the early 1970s the spiral of silence theory has become one of the most studied theories of communication and public opinion. It has been tested in varied sociopolitical contexts with different issues and across communication systems around the world. Attracting the interest of scholars from communication, political science, sociology, public opinion, and psychology, it has become both the subject of tempestuous academic debate as well as a mainstay in courses on communication theory globally. Reflecting substantial new thinking, this collection provides a comprehensive examination of the spiral of silence theory, offering a synthesis of prior research as well as a solid platform for future study. It addresses various ideological and methodological criticisms of the theory, links the theory with allied areas of scholarship, and provides analyses of empirical tests. Contributors join together to present a breadth of disciplinary and international perspectives. As a distinctive and innovative examination of this influential theory, this volume serves as a key resource for future research and scholarship in communication, public opinion, and political science. *The Internet of Things*

Christian Floerkemeier, Marc Langheinrich, Elgar Fleisch, Friedemann Mattern, Sanjay E. Sarma, 2008-03-15

This volume contains the proceedings of the Internet of Things (IOT) Conference 2008, the first international conference of its kind. The conference took place in Zurich, Switzerland, March 26-28, 2008. The term Internet of Things has come to describe a number of technologies and research disciplines that enable the Internet to reach out into the real world of physical objects. Technologies such as RFID, short range wireless communications, real time localization, and sensor networks are becoming increasingly common, bringing the Internet of Things into industrial, commercial, and domestic use. IOT 2008 brought together leading researchers and practitioners from both academia and industry to facilitate the sharing of ideas, applications, and research results. IOT 2008 attracted 92 high quality submissions, from which the technical program committee accepted 23 papers, resulting in a competitive 25% acceptance rate. In total, there were over 250 individual authors from 23 countries representing both academic and industrial organizations. Papers were selected solely on the quality of their blind peer reviews. We were fortunate to draw on the combined experience of our 59 program committee members coming from the most prestigious universities and research labs in Europe, North America, Asia, and Australia. Program committee members were aided by no less than 63 external reviewers in this rigorous process, in which each committee member wrote about 6 reviews. The total of 336 entered reviews resulted in an average of 3.7 reviews per paper, or slightly more than 1000 words of feedback for each paper submitted. **The Law Journal Reports**, 1906

Quantitative Narrative Analysis Roberto Franzosi, 2010 Quantitative Narrative Analysis focuses on the following issues: 1. the fundamental features of narrative as a specific type of text genre with certain invariant linguistic properties; 2. how the invariant properties of narrative can be used to structure narrative information in ways that basic qualitative information can then be analyzed quantitatively; story grammars or Subject-Action-Object and respective modifiers such as Time and Space of Action; 3. reliability and how the computer and linguistic framework of the approach greatly increase data reliability; 4. data analysis.
