Patterns of Exclusion János Ladányi, Iván Szelényi, 2006 Drawing on historical and demographic data from the past 150 years Ivan Szelenyi and Janos Ladanyi examine how the social conditions of the Roma Gypsies has changed over time and across countries While Gypsies always tended to be poor and at the margins of society the depth and nature of their poverty and the ways they were excluded varied substantially In addition to providing a detailed history of these changes the book also contributes to debates regarding Gypsies status as part of an underclass The historical case studies show that during the nineteenth century Gypsies belonged to the lower class during the interwar

years they could be seen as a lower caste and it is only during the last two decades that they are in the process of becoming an underclass The underclass debate has so far been framed in ideological terms This book s main aim is to turn this ideological controversy into an analytic project under what socioeconomic conditions is a social group s situation sufficiently different from earlier times Is its exclusion from society sufficiently rigid that underclass is the concept that best describes its condition

The Matter of Facts Gareth Leng,Rhodri Ivor Leng,2020-03-18 How biases the desire for a good narrative reliance on citation metrics and other problems undermine confidence in modern science Modern science is built on experimental evidence yet scientists are often very selective in deciding what evidence to use and tend to disagree about how to interpret it In The Matter of Facts Gareth and Rhodri Leng explore how scientists produce and use evidence They do so to contextualize an array of problems confronting modern science that have raised concerns about its reliability the widespread use of inappropriate statistical tests a shortage of replication studies and a bias in both publishing and citing positive results Before these problems can be addressed meaningfully the authors argue we must understand what makes science work and what leads it astray The myth of science is that scientists constantly challenge their own thinking But in reality all scientists are in the business of persuading other scientists of the importance of their own ideas and they do so by combining reason with rhetoric Often they look for evidence that will support their ideas not for evidence that might contradict them often they present evidence in a way that makes it appear to be supportive and often they ignore inconvenient evidence In a series of essays focusing on controversies disputes and discoveries the authors vividly portray science as a human activity driven by passion as well as by reason By analyzing the fluidity of scientific concepts and the dynamic and unpredictable development of scientific fields the authors paint a picture of modern science and the pressures it faces

Moral Luck Bernard Williams, 1981-12-03 A new volume of philosophical essays by Bernard Williams The book is a successor to Problems of the Self but whereas that volume dealt mainly with questions of personal identity Moral Luck centres on questions of moral philosophy and the theory of rational action That whole area has of course been strikingly reinvigorated over the last decade and philosophers have both broadened and deepened their concerns in a way that now makes much earlier moral and political philosophy look sterile and trivial Moral Luck contains a number of essays that have contributed influentially to this development Among the recurring themes are the moral and philosophical limitations of utilitarianism the notion of integrity relativism and problems of moral conflict and rational choice The work presented here is marked by a high degree of imagination and acuity and also conveys a strong sense of psychological reality The volume will be a stimulating source of ideas and arguments for all philosophers and a wide range of other readers
