

join with another group to complete the 4 spring balances needed for the four holes around the board.

- During the post activity discussion, the students must realize that there are still forces acting upon objects at rest. But these forces balance each other thereby causing the objects to stay in place. Emphasize the following ideas:
 - If two forces acting on an object are equal in magnitude but opposite in direction, they are considered as balanced forces. These forces must lie along the same line.
 - If the forces acting on an object are balanced, the object either stays at rest or continues to move at constant velocity.
 - If the forces acting on an object are unbalanced, the motion of the object will change. This concept was discussed in the module using the rolling ball as an example. Emphasize that the ball slowed down and eventually stopped not because *its force was already used up* nor *the force acting on it was continuously decreasing* (misconceptions). The ball slowed down and stopped because an unbalanced force caused it to change its motion. That unbalanced force is friction. This can be reiterated when Newton's First Law of Motion is discussed.

Answers to Questions

Q7. The forces are equal in magnitude but opposite in direction.

Q8. If the lines of action of the forces are extended, they meet at a single point.

Note: At this point, the term "concurrent forces" may be introduced. When the lines of action of the forces acting on an object meet at a single point, they are considered as concurrent forces. When the forces acting on an object are concurrent, the object does not move nor rotate.

Concept check:

1. $F_{\text{net}} = 20$ units
2. $F_{\text{net}} = 5$ units. The object will move in the direction of the 10-unit force (larger force).
3. $F_{\text{net}} = 0$. The object will not move.
