Answer the following questions:

- 1.1 Describe the hydrologic cycle, components, and processes. The hydrologic cycle is a continuous cycle of water on Earth. It involves the movement of water between the atmosphere, land, and oceans. The cycle is driven by the sun's energy, which causes water to evaporate from the surface of the Earth. The water vapor then condenses into clouds, which release precipitation in the form of rain or snow. The precipitation then flows into bodies of water, such as rivers, lakes, and oceans, or infiltrates the ground to become groundwater. The water eventually returns to the atmosphere through evaporation or transpiration from plants.
- 1.2 Define erosion, and the following erosion parts: source, transport, deposition, and sediment. Erosion is the process of wearing away the Earth's surface. It is caused by the movement of water, wind, and ice. The parts of erosion are: source (the area where the material is eroded), transport (the movement of the material), and deposition (the area where the material is deposited).
- 1.3 Define drainage basin and divide. A drainage basin is the area of land that drains water into a single body of water. A divide is the boundary between two drainage basins.
- 1.4 Define drainage pattern, dendritic, and rectangular drainage patterns. A drainage pattern is the arrangement of a river and its tributaries. A dendritic pattern is a branching pattern, and a rectangular pattern is a grid-like pattern.
- 1.5 Define river erosion, meandering, and oxbow lakes. River erosion is the process of a river wearing away the land. Meandering is the process of a river flowing in a series of loops. An oxbow lake is a body of water that has been cut off from a river.
- 1.6 Define flood, and the following flood parts: source, transport, and deposition. A flood is a rise in the level of a body of water. The parts of a flood are: source (the area where the water is rising), transport (the movement of the water), and deposition (the area where the water is deposited).
- 1.7 Define erosion by wind, and the following erosion parts: source, transport, and deposition. Erosion by wind is the process of wind wearing away the land. The parts of erosion by wind are: source (the area where the material is eroded), transport (the movement of the material), and deposition (the area where the material is deposited).
- 1.8 Define the water table, and the following water table parts: source, transport, and deposition. The water table is the level of the ground water. The parts of the water table are: source (the area where the water is rising), transport (the movement of the water), and deposition (the area where the water is deposited).
- 1.9 Define the different types of sedimentation, and the following sedimentation parts: source, transport, and deposition. Sedimentation is the process of settling of particles. The parts of sedimentation are: source (the area where the material is eroded), transport (the movement of the material), and deposition (the area where the material is deposited).
