Nuclear Science Abstracts ,1976 **Neuroscience** Alwyn Scott,2002-06-19 This book will be of interest to anyone who wishes to know what role mathematics can play in attempting to comprehend the dynamics of the human brain It also aims to serve as a general introduction to neuromathematics The book gives the reader a qualitative understanding and working knowledge of useful mathematical applications to the field of neuroscience The book is readable by those who have little knowledge of mathematics for neuroscience but are committed to begin acquiring such knowledge **International Conference on Theoretical Physics** Daniel Iagolnitzer,Vincent Rivasseau,Jean Zinn-Justin,2004 The International Conference on Theoretical Physics TH 2002 took place in Paris from July 22 to 27 in the Conference Center of the UNESCO the United Nations Educational Scientific and Cultural Organization under aegis of the IUPAP the International Union of Pure and Applied Physics and of the French and European Physical Societies with a large support of several French European and international Institutions International and crossdisciplinary TH 2002 welcomed around 1200 participants representing all domains of modern theoretical physics The conference offered a high level scientific program including 18 plenary lectures 45 general lectures in thematic sessions and 140 more specialized lectures partly invited and partly selected among proposals received from participants Around 500 contributions were also presented as posters Plenary lectures as well as general thematic lectures were addressed to a general audience of theoreticians not only to specialists According to our commitments towards UNESCO and other sponsoring institutions TH 2002 attributed more than 200 fellowships mostly to scientists from developing countries and Eastern Europe covering registration fees and for more than half of them stay expenses with student type accommodation Special highlights of the conference included the opening ceremony on July 22 with the participation of Mrs Claudie Haignere French Minister of Research and M Walter Erden General Adjunct Director for Sciences at UNESCO Their opening addresses were especially appreciated and are reproduced below This ceremony preceded the first lecture by Professor Cohen Tannoudji Physics Nobel prize winner [Programming and Computer Techniques in Experimental Physics](#) D. V. Skobel'tsyn,2013-03-08 **Methodological Issues in Consciousness Research, volume II** Axel Cleeremans,2025-04-16 This Research Topic is the second volume of the Research Topic Methodological Issues in Consciousness Research Please see the first volume here The simplest and perhaps the first notion of consciousness in the West as a sentience or awareness of internal or external existence was introduced in the Seventeenth century by the English physician Robert Fludd though similar and even more refined notions of consciousness were developed centuries before in Indian philosophy and contemplative wisdom traditions Because it permeates human existence in so many different ways the study of consciousness is a profoundly interdisciplinary endeavour and engages disciplines such as philosophy including Eastern philosophy cognitive neuroscience anthropology psychiatry and psychopathology and even physics The study of consciousness may involve domains as diverse as perceptual awareness cognition and

metacognition reasoning executive control theory of mind self sleep and dreaming emotional competence and empathy It concerns both healthy e g aging meditation spiritual experiences and pathological conditions e g epilepsy neglect and locked in syndromes minimally conscious states anesthesia and involves considerations operating at different time scales e g evolution development expertise Today however and despite almost thirty years of concerted interdisciplinary efforts the nature and mechanisms of consciousness remain as elusive as ever Theoretically different conceptual frameworks aimed at characterizing both its functional and phenomenal aspects take sometimes radically different assumptions as their starting point but often fail to make sufficiently precise differential predictions to be falsifiable While most recent views generally consider methods investigating human higher order reflective or access consciousness the theoretical and experimental foundations of primary proto consciousness often remain vague and ignore evolutionary considerations Influential distinctions such as the distinction between phenomenal and access consciousness between pre reflective minimal and the reflective narrative self between graded and all or none processing or even between conscious and unconscious processing all remain unsettled or controversial The field is also rife with methodological challenges and controversies some of which remain largely unsolved Questions such as how to best measure awareness or to how establish its absence issues such as what kind of neuroscientific data would convincingly make it possible to isolate the neural correlates of consciousness or what types of confounds contaminate extant findings challenges such as how to imagine crucial experiments that are sufficiently sensitive to falsify some theoretical proposals all need to be addressed in open interdisciplinary dialogue This Frontiers Research Topic is aimed at stimulating discussion about current methodological issues and trends in consciousness research We welcome theoretical and empirical contributions as well as empirical articles from both experts and young scientists who work in the field of consciousness research Submissions of related hypotheses original research articles case reports perspectives reviews opinions and commentaries are welcome We very much hope that this Frontiers Research Topic will contribute to enhancing our characterization and understanding of the methodological and conceptual challenges associated with the study of human consciousness
