

Study Guide: Physical and Chemical Oceanography

Effect of composition of ocean water affected by:

- 1) salinity - given defined by mass-percentage of water which depends on the amount of water which has evaporated or which has precipitated
- 2) depth - water moving through salt by capillary action which causes the water to rise and so moving up through the water column and so the water becomes more saline
- 3) biological processes - the biological processes which are involved in the water column and the water column is affected by the biological processes which are involved in the water column

Effect of salinity and depth on density:

- 1) density - mass per unit volume - mass/volume
- 2) density - mass per unit volume - mass/volume

How temperature and salinity produce density water column stratification:

Temperature differences water column stratification:

- 1) temperature - water column - water column
- 2) temperature - water column - water column
- 3) temperature - water column - water column

Salinity differences water column stratification:

- 1) salinity - water column - water column
- 2) salinity - water column - water column
- 3) salinity - water column - water column
- 4) salinity - water column - water column

Effect:

How temperature and salinity differences affect the density of water column stratification.

Temperature effects:

on the water column, the water column is affected by the temperature differences.

Salinity effects: - the differences in salinity between the water column and the water column.

How the differences in salinity affect the density of water column stratification:

on the water column, the water column is affected by the salinity differences.
