Speculative Realism Peter Gratton, 2014-07-31 Speculative realism is one of the most talked about movements in recent Continental philosophy It has been discussed widely amongst the younger generation of Continental philosophers seeking new philosophical approaches and promises to form the cornerstone of future debates in the field This book introduces the contexts out of which speculative realism has emerged and provides an overview of the major contributors and latest developments It guides the reader through the important questions asked by realism what can I know what is reality examining philosophy s perennial questions in new ways The book begins with the speculative realist s critique of correlationism the view that we can never reach what is real beneath our language systems our means for perception or our finite manner of being in the world It goes on to critically review the work of the movement s most important thinkers including Quentin Meillassoux Ray Brassier and Graham Harman but also other important writers such as Jane Bennett and Catherine Malabou whose writings delineate alternative approaches to the real It interrogates the crucial questions these thinkers have raised and concludes with a look toward the future of speculative realism especially as it

relates to the reality of time Forest Hydrology Devendra Amatya, Thomas Williams, Leon Bren, Carmen de Jong, 2016-09-14 Forests cover approximately 26% of the world's land surface area and represent a distinct biotic community. They interact with water and soil in a variety of ways providing canopy surfaces which trap precipitation and allow evaporation back into the atmosphere thus regulating how much water reaches the forest floor as through fall as well as pull water from the soil for transpiration. The discipline forest hydrology has been developed throughout the 20th century. During that time human intervention in natural landscapes has increased and land use and management practices have intensified. The book will be useful for graduate students, professionals, land managers, practitioners and researchers with a good understanding of the basic principles of hydrology and hydrologic processes **Geology's Significant Sites and their Contributions to Geoheritage** R. M. Clary, E.J. Pyle, W.M. Andrews, 2024-07-23 The contributions in this book explore several geologically significant sites and in doing so acknowledge and explore not just the geological exposures themselves but also the people and issues that are fundamentally intertwined with the history of our science and its impact on our society. Through selective examples of outcrops and locales integral to the history of geology we explore the evolution of modern geology as well as the geodiversity and geoheritage of our planet. While the volume is far from comprehensive the chapters contained herein detail a range for geoheritage value scale of geoheritage sites and potential for geoheritage opportunities that will promote a broader, richer understanding of the complexity of the geoheritage of Earth. Importantly many chapters offer a cautionary tale of sites almost lost to posterity and submit their take away lessons for community mobilization towards geoheritage site protection Empires of Sustainability Joseph Murphy, 2024-06-07 Focussing on the greening of imperialisms and empires *Empires of Sustainability* analyses the shift around the world from denial of the environmental crisis to action to prevent catastrophe and the resulting implications. Evidence of this shift is clear in widespread and purposeful social change which is gathering momentum. The book explains how globalisation accelerated us towards the crisis and today even as its own legitimacy is being questioned is evolving through solutions and responses to it. Looking ahead and as the environmental crisis worsens two possible futures are discerned and explored. One is that through universal actions to save the planet shaped by interweaving political and economic forces the hegemony of globalisation is restored albeit in a green form. The other is that the world reorganises into competing spheres of influence with politics, economics and the environment interwoven differently in each case. In these ways we face the prospect of one or more Empires of Sustainability emerging over the decades ahead unless we build a better alternative society. The author presents an alternative a more diverse World of Caring Places. This accessible book will appeal to students and scholars of international political economy, sustainability and environmental studies and analysts, policy makers, campaigners and others concerned about the future of relations between people and planet **China in Space** Brian Harvey, 2019-10-08 In 2019 China astonished the world by landing a spacecraft and rover on the far side of the Moon something never achieved by any country before. When the Ice Is Gone Paul Bierman, 2024-08-20 A New Yorker Best Book of the Year. A remarkable scientific detective story. Bill McKibben, author of *The End of Nature*. Paul

Bierman's realization that Greenland's ice sheet melted when Earth was no warmer than today sounds an alarm for our planet. In 2018, lumps of frozen soil collected from the bottom of the world's first deep ice core and lost for decades reappeared in Denmark. When geologist Paul Bierman and his team first melted a piece of this unique material, they were shocked to find perfectly preserved leaves, twigs, and moss. That observation led them to a startling discovery: Greenland's ice sheet had melted naturally before about 400,000 years ago. The remote island's ice was far more fragile than scientists had realized, unstable even without human interference. In *When the Ice Is Gone*, Bierman traces the story of this extraordinary finding, revealing how it radically changes our understanding of the Earth and its climate. A longtime researcher in Greenland, he begins with a brief history of the island, both human and geological, explaining how over the last century scientists have learned to read the historical record in ice, deciphering when volcanoes exploded and humans started driving cars fueled by leaded gasoline. For the origins of ice coring, Bierman brings us to Camp Century, a U.S. military base built inside Greenland's ice sheet where engineers first drilled through mile-thick ice and into the frozen soil beneath. Decades later, a few feet of that long-frozen earth would reveal its secrets: ancient warmth and melted ice. Changes in Greenland reverberate around the world, with ice melting high in the Arctic affecting people everywhere. Bierman explores how losing Greenland's ice will catalyze devastating events if we don't change course and address climate change now.

Becoming Mobius Dr. Debra Kidd, 2015-06-10. *Becoming Mobius* is about living with uncertainty. Uncertainty is a state of being that many people struggle with both in day-to-day life and in education. Being uncertain has almost become a sin. If we are truly to have an education system that works, we need to accept that learning and life are not simple, and we need to engage with difficult and complex ideas. Focusing on the process of learning and teaching, Dr. Debra Kidd posits the possibility that wondering and wandering teachers might impact greatly on a child's ability to live with and thrive among uncertainties. She asks of us not only as teachers or researchers but simply as human beings: what are the things that affect us, and how can we remain attuned to all their possibilities while still functioning? Taking cues from neuroscience, physi anthropology, and philosophy, particularly that of Gilles Deleuze and Felix Guattari, but also Hannah Arendt, Jacques Derrida, Michel Foucault, and others, Dr. Kidd explores the nature and purpose of education through a series of different lenses. Details moments, interactions, and relationships are put under the microscope, and their effects on teaching and learning are examined. *Becoming Mobius* started life as Debra Kidd's doctoral thesis and draws on her extensive classroom experience, her own observations,

and research and a broad base of educational thought including the work of Gert Biesta Masny s Multiple Literacies and more In Becoming Mobius each chapter is presented as a plateau and maps the complexities of teaching and learning This is a journey through a landscape of education It is not a straight route It is not a cop out It is a means of living in with and through complexity and multiplicity It is an attempt to bring forward a fresh vision of education This is an honest challenging and incredibly profound book that makes you stop and think deeply about what you do why you do it and the effect it has You will never look at teaching in the same light again For anyone interested in thinking deeply about education

Fostering Transformative Research in the Geographical Sciences National Academies of Sciences, Engineering, and Medicine,Division on Earth and Life Studies,Board on Earth Sciences and Resources,Geographical Sciences Committee,Committee on Identifying Transformative Research in the Geographical Sciences,2019-04-22 The central purpose of all research is to create new knowledge In the geographical sciences this is driven by a desire to create new knowledge about the relations between space place and the anthropogenic and non anthropogenic features and processes of the Earth But some research goes beyond these modest aims and creates new opportunities for further research or affects the process of knowledge acquisition more broadly or changes the way other researchers in a domain think about the world and go about their business Due to its positive impacts transformative research can be regarded as inherently having greater value than more conventional research and funding agencies clearly regard transformative research as something to be encouraged and funded through special programs Assessments of transformative research funding initiatives are few and provide a mixed picture of their effectiveness The challenge is whether transformative research can be identified at the time it is proposed rather than after it has been conducted communicated and its influence on the discipline has become clear

Fostering Transformative Research in the Geographical Sciences reviews how transformative research has emerged in the past what its early markers were and makes recommendations for how it can be nurtured in the future

Weinberger,Daniel Marcus,John Van Horn,Venkata Satyanand Mattay,Qian Luo,2015-12-11 The huge volume of multi modal neuroimaging data across different neuroscience communities has posed a daunting challenge to traditional methods of data sharing data archiving data processing and data analysis Neuroinformatics plays a crucial role in creating advanced methodologies and tools for the handling of varied and heterogeneous datasets in order to better understand the structure and function of the brain These tools and methodologies not only enhance data collection analysis integration interpretation modeling and dissemination of data but also promote data sharing and collaboration This Neuroinformatics Research Topic aims to summarize the state of art of the current

achievements and explores the directions for the future generation of neuroinformatics infrastructure. The publications present solutions for data archiving, data processing and workflow, data mining and system integration methodologies. Some of the systems presented are large in scale, geographically distributed and already have a well established user community. Some discuss opportunities and methodologies that facilitate large scale parallel data processing tasks under a heterogeneous computational environment. We wish to stimulate on going discussions at the level of the neuroinformatics infrastructure including the common challenges, new technologies of maximum benefit, key features of next generation infrastructure etc. We have asked leading research groups from different research areas of neuroscience, neuroimaging to provide their thoughts on the development of a state of the art and highly efficient neuroinformatics infrastructure. Such discussions will inspire and help guide the development of a state of the art, highly efficient neuroinformatics infrastructure.
