generation and indeed one of the most eminent philosophers of science of our century He introduced and elucidated the notion of the correspondence rule He claimed and showed in the heyday of positivism that physics has metaphysical presuppositions He was the first to realize that quantum mechanics can do without von Neumann's projection postulate and that was as far back as 1936 He clarified the physics and the philosophy of Pauli's exclusion principle at a time when it seemed mysterious He was the first physicist to publish a philosophical paper in a physics journal which he did as early as 1941 He was also one of the rare scientists who proclaimed the need for a scientific approach to value theory and ethics

Flat Space Cosmology Eugene Terry Tatum, U.V.S. Seshavatharam, 2021-06-15 This compilation based upon recent peer-reviewed journal publications encapsulates how the Flat Space Cosmology model (FSC) has become the primary competitor to the inflationary standard model of cosmology. New ideas concerning black holes, dark energy, and dark matter are presented and shown to correlate extremely well with astronomical observations. Anyone who follows the fast-changing science of cosmology has an interest in the latest developments and would like to know how it is that our universe appears to follow equations one would ordinarily expect for a time-reversed black hole. May find this book to be fascinating. Cosmology is the study of how the universe has changed over the great span of time, roughly 14 billion years. Later centuries will look back upon the period from 1990-2030 as a Golden Age of theoretical and observational cosmology. It is highly likely that we are on the verge of a deeper understanding of the most mysterious energy, dark energy, and matter, dark matter, comprising the majority of energy and matter in the universe. Some of the material presented in this book is on the cutting edge of dark energy and dark matter theoretical work. This book summarizes for the first time the groundbreaking publications of two cosmologists, one from the United States and the other from India, from 2015 thru 2020. During this highly productive period, the authors stealthily published their papers in six different peer-reviewed scientific journals so that the model could be quietly explored in all aspects before bringing it all together in a single book. This is that book.
