Evolution and Development Alan C. Love, 2024-03-07 The intersection of development and evolution has always harbored conceptual issues but many of these are on display in contemporary evolutionary developmental biology evo devo These issues include 1 the precise constitution of evo devo with its focus on both the evolution of development and the developmental basis of evolution and how it fits within evolutionary theory 2 the nature of evo devo model systems that comprise the material of comparative and experimental research 3 the puzzle of how to understand the widely used notion of conserved mechanisms 4 the definition of evolutionary novelties and expectations for how to explain them and 5 the demand of interdisciplinary collaboration that derives from investigating complex phenomena at key moments in the history of life such as the fin limb transition This Element treats these conceptual issues with close attention to both empirical detail and scientific practice to offer new perspectives on evolution and development This title is also available as Open Access on Cambridge Core

Patterns of Growth and Development in the Genus Homo J. L. Thompson, G. E. Krovitz, A. J. Nelson, 2003-12-04 It is generally accepted that the earliest human ancestors grew more like apes than like humans today If they did so and we are now different when how and why did our modern growth patterns evolve This book focuses on species within the genus Homo to investigate the evolutionary origins of characteristic human patterns and rates of craniofacial and postcranial growth and development and to explore unique ontogenetic patterns within each fossil species Experts examine growth patterns found within available Plio Pleistocene hominid samples and analyse variation in ontogenetic patterns and rates of development in recent modern humans in order to provide a comparative context for fossil hominid studies Presenting studies of some of the newer juvenile fossil specimens and information on Homo antecessor this book will provide a rich data source with which anthropologists and evolutionary biologists can address the questions posed above

Lala, 2019-09-03 A comprehensive treatment of the concept of causation in evolutionary biology that makes clear its central role in both historical and contemporary debates Most scientific explanations are causal This is certainly the case in evolutionary biology which seeks to explain the diversity of life and the adaptive fit between organisms and their surroundings The nature of causation in evolutionary biology however is contentious How causation is understood shapes the structure of evolutionary theory and historical and contemporary debates in evolutionary biology have revolved around the nature of causation Despite its centrality and differing views on the subject the major conceptual issues regarding the nature of causation in evolutionary biology are rarely addressed This volume fills the gap bringing together biologists and philosophers to offer a comprehensive interdisciplinary treatment of evolutionary causation Contributors first address

biological motivations for rethinking evolutionary causation considering the ways in which development extra genetic inheritance and niche construction challenge notions of cause and process in evolution and describing how alternative representations of evolutionary causation can shed light on a range of evolutionary problems Contributors then analyze evolutionary causation from a philosophical perspective considering such topics as causal entanglement the commingling of organism and environment and the relationship between causation and information Contributors John A Baker Lynn Chiu David I Dayan Ren e A Duckworth Marcus W Feldman Susan A Foster Melissa A Graham Heikki Helanter Kevin N Lala Armin P Moczek John Odling Smee Jun Otsuka Massimo Pigliucci Arnaud Pocheville Arlin Stoltzfus Karola Stotz Sonia E Sultan Christoph Thies Tobias Uller Denis M Walsh Richard A Watson

Principles of Evolution Hildegard Meyer-Ortmanns, Stefan Thurner, 2011-04-11 With contributions from a team of leading experts this volume provides a comprehensive survey of recent achievements in our scientific understanding of evolution The questions it asks concern the beginnings of the universe the origin of life and the chances of its arising at all the role of contingency and the search for universal features in the plethora of evolutionary phenomena Rather than oversimplified or premature answers the chapters provide a clear picture of how these essential problems are being tackled enabling the reader to understand current thinking and open questions The tools employed stem from a range of disciplines including mathematics physics biochemistry and cell biology Self organization as an overarching concept is demonstrated in the most diverse areas from galaxy formation in the universe to spindle and aster formation in the cell Chemical master equations population dynamics and evolutionary game theory are presented as suitable frameworks for understanding the universal mechanisms and organizational principles observed in a wide range of living units ranging from cells to societies This book will provide engaging reading and food for thought for all those seeking a deeper understanding of the science of evolution

Origins of Biodiversity Lindell Bromham, Marcel Cardillo, 2019 Origins of Biodiversity is a unique introduction to the fields of macroevolution and macroecology which explores the evolution and distribution of biodiversity across time space and lineages Using an enquiry led framework to encourage active learning and critical thinking each chapter is based around a case study to explore concepts and research methods from contemporary

macroevolution and macroecology The book focuses on the process of science as much as the biology itself to help students acquire the research skills and intellectual tools they need to understand and investigate the biological world around them In particular the emphasis on hypothesis testing encourages students to develop and test their own ideas This text builds upon the foundations offered in most general introductory evolutionary biology courses to introduce an exciting range of ideas and research tools for investigating patterns of biodiversity

The formation of patterns in subaqueous sediment

Kidanemariam, Aman Ghebremichael, 2016-11-14 This book investigates the formation of subaqueous patterns by means of high fidelity numerical simulations which resolve all the relevant scales of the flow and the sediment bed This is required to provide a space and time resolved information on the flow field and the sediment bed Secondly detailed analysis of the generated data allows to address the different governing mechanisms involved in the formation of patterns as well as to access the validity of various existing models

Molecular Phylogenetics of the Metazoan Clade Lophotrochozoa Yale J. Passamaneck, 2003 DNA sequencing and phylogenetic analyses were conducted to investigate evolutionary relationships between taxa within the metazoan clade Lophotrochozoa Chapter 1 presents an introduction to phylogenetics of the Metazoa and the clade Lophotrochozoa Chapter 2 analyzes relationships between the major groups within the phylum Mollusca using sequences of the nuclear ribosomal large subunit RNA gene LSU rDNA Results presented provide the first molecular evidence for a close relationship between the Scaphopoda and Cephalopoda Chapter 3 utilizes LSU rDNA sequences to analyze relationships between phyla within the clade Lophotrochozoa LSU rDNA sequences provided greater resolution than have previous analyses of the nuclear small subunit ribosomal RNA gene SSU rDNA Analysis of LSU rDNA sequences recovered the monophyly of several phyla such as Mollusca and Annelida whose members are found to be paraphyletic using SSU rDNA sequences alone Results also suggest that the clade Platyzoa may have arisen within the Lophotrochozoa Chapter 4 investigates the Hox gene complement of the bryozoan *Bugula turrita* Six Hox genes were recovered including an ortholog of the posterior class gene *Post2* which is a synapomorphy for the Lophotrochozoa The identification of a *Post2* ortholog provides evidence of a close relationship between the Bryozoa and other lophotrochozoan phyla

Hormones and

Reproduction of Vertebrates David O. Norris, Kristin H. Lopez, 2010-11-25 This series of volumes represents a comprehensive and integrated treatment of reproduction in vertebrates from fishes of all sorts through mammals It is designed to provide a readable coordinated description of reproductive basics in each group of vertebrates as well as an introduction to the latest trends in reproductive research and our understanding of reproductive events Whereas each chapter and each volume is intended to stand alone as a review of that topic or vertebrate group respectively the volumes are prepared so as to provide a thorough topical treatment across the vertebrates Terminology has been standardized across the volumes to reduce confusion where multiple names exist in the literature and a comprehensive glossary of these terms and their alternative

names is provided A complete essential and up to date reference for research scientists working on vertebrate hormones and reproduction and on animals as models in human reproductive research Covers the endocrinology neuroendocrinology physiology behaviour and anatomy of vertebrate reproduction Structured coverage of the major themes for all five vertebrate groups allows a consistent treatment for all Special chapters elaborate on features specific to individual vertebrate groups and to comparative aspects similarities and differences between them Dynamic Patterns J. A. Scott Kelso, 1995 foreword by Hermann Haken For the past twenty years Scott Kelso's research has focused on extending the physical concepts of self organization and the mathematical tools of nonlinear dynamics to understand how human beings and human brains perceive intend learn control and coordinate complex behaviors In this book Kelso proposes a new general framework within which to connect brain mind and behavior Kelso's prescription for mental life breaks dramatically with the classical computational approach that is still the operative framework for many newer psychological and neurophysiological studies His core thesis is that the creation and evolution of patterned behavior at all levels from neurons to mind is governed by the generic processes of self organization Both human brain and behavior are shown to exhibit features of pattern forming dynamical systems including multistability abrupt phase transitions crises and intermittency Dynamic Patterns brings together different aspects of this approach to the study of human behavior using simple experimental examples and illustrations to convey essential concepts strategies and methods with a minimum of mathematics Kelso begins with a general account of dynamic pattern formation He then takes up behavior focusing initially on identifying pattern forming instabilities in human sensorimotor coordination Moving back and forth between theory and experiment he establishes the notion that the same pattern forming mechanisms apply regardless of the component parts involved parts of the body parts of the nervous system parts of society and the medium through which the parts are coupled Finally employing the latest techniques to observe spatiotemporal patterns of brain activity Kelso shows that the human brain is fundamentally a pattern forming dynamical system poised on the brink of instability Self organization thus underlies the cooperative action of neurons that produces human behavior in all its forms Hormones and Reproduction of Vertebrates, Volume 3 David O. Plant Transposons and Genome Dynamics in Evolution Nina V. Fedoroff,2013-04-15 The transposable genetic elements or transposons as they are now known have had a tumultuous history Discovered in the mid 20th century by Barbara McClintock they were initially received with puzzlement When their genomic abundance began to be apparent they were categorized as junk DNA and acquired the label of parasites Expanding understanding of gene and genome organization has revealed the profound extent of their impact on both Plant Transposons and Genome Dynamics in Evolution captures and distills the voluminous research literature on plant transposable elements and seeks to assemble the big picture of how transposons shape gene structure and regulation as well as how they sculpt genomes in evolution Individual chapters provide concise overviews of the many flavors of plant transposons and of their roles in gene creation gene regulation development genome evolution and organismal speciation as well as of their epigenetic regulation This volume is essential reading for anyone working in plant genetics epigenetics or evolutionary biology

Artificial Life IX Jordan B. Pollack,2004 Proceedings from the ninth International Conference on Artificial Life papers by scientists of many disciplines focusing on the principles of organization and applications of complex life like systems Artificial Life is an interdisciplinary effort to investigate the fundamental properties of living systems through the simulation and synthesis of life like processes The young field brings a powerful set of tools to the study of how high level behavior can arise in systems governed by simple rules of interaction Some of the fundamental questions include What are the principles of evolution learning and growth that can be understood well enough to simulate as an information process Can robots be built faster and more cheaply by mimicking biology than by the product design process used for automobiles and airplanes How can we unify theories from dynamical systems game theory evolution computing geophysics and cognition The field has contributed fundamentally to our understanding of life itself through computer models and has led to novel solutions to complex real world problems across high technology and human society This elite biennial meeting has grown from a small workshop in Santa Fe to a major international conference This ninth volume of the proceedings of the international A life conference reflects the growing quality and impact of this interdisciplinary scientific community
