Physical Science November 2014:

Life-cycle of Structural Systems Hitoshi Furuta,Mitsuyoshi Akiyama,Dan M. Frangopol,2018-12-07 This book aims to promote the study research and applications in the design assessment prediction and optimal management of life cycle performance safety reliability and risk of civil structures and infrastructure systems The contribution in each chapter presents state of the art as well as emerging applications related to key aspects of the life cycle civil engineering field The chapters in this book were originally published as a special issue of Structure and Infrastructure Engineering

Environment, Climate, Plant and Vegetation Growth Shah Fahad,Mirza Hasanuzzaman,Mukhtar Alam,Hidayat Ullah,Muhammad Saeed,Imtiaz Ali Khan,Muhammad Adnan,2020-10-05 This book provides an up to date account of the current understanding of climate change and global warming related to environment climate plant and vegetation growth The aim of this book is to provide a platform for scientists and academics world wide to promote share and discuss various new issues and developments in the area of plant and vegetation growth related to climate change Over the next decades it is predicted that billions of people particularly those in developing countries face shortages of water and food and greater risks to health and life as a result of climate change Concerted global action is needed to enable developing countries to adapt to the effects of climate change that are happening now and will worsen in the future The book will also enhance the understanding on issues related to climate change giving a clear indication of a looming global warming crisis Addressing global climate change is a monumental battle that can only be fought by the leaders of tomorrow but future leaders are molded through education and shaped by the leaders of today *What We Think About When We Try Not To Think About Global Warming* Per Espen Stoknes,2015 Today about 98 percent of scientists affirm that climate change is human made and about 2 percent still question it Despite that overwhelming majority though about half the population of rich countries like ours choose to believe the 2 percent And paradoxically this large camp of deniers grows even larger as more and more alarming proof of climate change has cropped up over the last decades This disconnect has both climate scientists and activists scratching their heads growing anxious and responding usually by repeating more facts to win the argument But the more climate facts pile up the greater the resistance to them grows and the harder it becomes to enact measures to reduce greenhouse gas emissions and prepare communities for the inevitable change ahead Is humanity up to the task It is a catch 22 that starts says psychologist and climate expert Per Espen Stoknes from an inadequate understanding of the way most humans think act and live in the world around them With dozens of examples he shows how to retell the story of climate change and apply communication strategies more fit for the task Publisher s description [Sustainable jet fuel for aviation](#) Wormslev, Erik C.;Pedersen, Jakob Louis;Eriksen, Christian;Bugge, Rasmus;Skou, Nicolaj,Tang, Camilla,Liengaard, Toke,Hansen, Rasmus Schnoor,Eberhardt, Johannes Momme,Rasch, Marie Katrine,Höglund, Jonas,Englund, Ronja Beijer,Sandquist, Judit,Güell, Berta M,2016-08-29 The study assesses to what extent the production and use of advanced

sustainable jet fuel may contribute to GHG reduction and mitigation and identifies the commercial potential for initiating and scaling up advanced sustainable jet fuel production at a Nordic level The report explores as well on how to most efficiently use the available Nordic know how feedstock and production facilities The report draws on the latest available reports and statistics as well as interviews with stakeholders and experts across the Nordic countries concludes on identifying the most matured technologies the Nordic opportunities and challenges and ideas to mitigate the barriers within the Nordic private and public sectors

The Underrepresentation of Women in Science: International and Cross-Disciplinary Evidence and Debate Stephen J. Ceci, Wendy M. Williams, Shulamit Kahn, 2018-04-20 There is no shortage of articles and books exploring women s underrepresentation in science Everyone is interested academics politicians parents high school girls and boys women in search of college majors administrators working to accommodate women s educational interests the list goes on But one thing often missing is an evidence based examination of the problem uninfluenced by personal opinions accounts of lived experiences anecdotes and the always encroaching inputs of popular culture This is why this special issue of *Frontiers in Psychology* can make a difference In it a diverse group of authors and researchers with even more diverse viewpoints find themselves united by their empirical objective approaches to understanding women s underrepresentation in science today The questions considered within this special issue span academic disciplines methods levels of analysis and nature of analysis what these article share is their scholarly evidence based approach to understanding a key issue of our time

The End of Doom Ronald Bailey, 2015-07-21 In the past five decades there have been many many forecasts of impending environmental doom They have universally been proven wrong Meanwhile those who have bet on human resourcefulness have almost always been correct In his widely praised book *Ecoscam* Ronald Bailey strongly countered environmentalist alarmism using facts to demonstrate just how wildly overstated many claims of impending ecological doom really were Now twenty years later the Reason Magazine science correspondent is back to assess the future of humanity and the global biosphere Bailey finds contrary to popular belief that many present ecological trends are quite positive Including Falling cancer incidence rates in the United States The likelihood of a declining world population by mid century The abundant return of agricultural land to nature as the world reaches peak farmland A proven link between increases in national wealth and reductions in air and water pollution Global warming is a problem but the cost of clean energy could soon fall below that of fossil fuels In *The End of Doom* Bailey avoids polemics and offers a balanced fact based and ultimately hopeful perspective on our current environmental situation Now isn t that a breath of fresh air

Futures: Imagining Socioecological Transformation Bruce Willems-Braun, 2018-02-02 *Futures Imagining Socioecological Transformation* brings together leading scholars to explore how we might know enact and struggle

for the conjoined social and ecological transformations we need to achieve just and sustainable futures The question of transformation and how it might be achieved is explored across a variety of topics and geographical sites and through heterodox analytical and theoretical approaches in a collective effort to move beyond a form of critique that hands down judgements to one that brings new ideas and new possibilities to life Chapters are lively and original engagements with concrete situations that sparkle with creativity Together they add up to an impressive study of how to live and what to struggle for in the complex socioecological landscapes of the Anthropocene This book was previously published as a special issue of the Annals of the Association of American Geographers Trade in the Service of Sustainable Development Olivier

De Schutter, 2015-09-10 In the Bretton Woods era trade liberalization the improvement of labour rights and working conditions and the strengthening of environmental policies were seen as mutually supportive But is this always true Can we continue to pretend to protect the rights of workers and to improve environmental protection particularly through climate change mitigation strategies within an agenda focused on trade liberalization Is it credible to pursue trade policies that aim to expand the volumes of trade without linking such policies to labour and environmental standards seen as non trade concerns This book asks these questions offering a detailed analysis of whether linkage is desirable and legally acceptable under the disciplines of the World Trade Organization WTO It concludes that trade can work for sustainable development but only if we see it as a means for social and environmental progress including climate change mitigation and if we avoid fetishizing it as an end to be pursued for its own sake The Great Mathematicians of Bharat Partha Pratim Ray

, 2023-12-20 The Great Mathematicians of Bharat emerges as a seminal work aligning perfectly with the vision of the National Education Policy NEP 2020 which emphasizes the integration and appreciation of Indian Knowledge Systems IKS in contemporary education This book meticulously documents the rich legacy of India's mathematical geniuses serving as a crucial resource in rekindling interest and respect for Bharat's profound mathematical traditions It underscores the symbiotic relationship between cultural ethos and scientific inquiry highlighting how Indian mathematicians not only contributed to the field of mathematics but also how their work was deeply interwoven with Hindu spiritual and cultural practices By chronicling the journey from ancient sages to modern masters the book provides a comprehensive view of the evolution of mathematical thought in Bharat thus fulfilling NEP 2020's objective of integrating indigenous knowledge with modern academic frameworks In doing so it not only educates but also inspires setting a precedent for future academic endeavours to explore and celebrate India's rich intellectual heritage *Paradigm Changes Are Required in HIV Vaccine*

Research Marc H. V. Van Regenmortel, 2015-12-08 In his 1962 book *The Structure of Scientific Revolutions* Thomas Kuhn famously argued that researchers in every field of scientific enquiry always operate under a set of presuppositions known as paradigms that are rarely explicitly stated In the field of HIV vaccine research several prevailing paradigms led scientists for many years to pursue unfruitful lines of investigations that impeded significant progress The uncritical acceptance of

reigning paradigms makes scientists reluctant to abandon their mistaken assumptions even when they obtain results that are not consistent with the paradigms The following five paradigms which disregard the degeneracy of the immune system were particularly harmful

- 1 There is a primary and intrinsic epitope specific for each B cell receptor and for the corresponding monoclonal antibody In reality there is no single intrinsic or real epitope for any antibody but only a diverse group of potential ligands
- 2 Reactions with monoclonal antibodies are more specific than the combined reactivity of polyclonal antibodies In reality a polyclonal antiserum has greater specificity for a multiepitopic protein because different antibodies in the antiserum recognize separate epitopes on the same protein giving rise to an additive specificity effect By focusing vaccine design on single epitope Mab pairs the beneficial neutralizing synergy that occurs with polyclonal antibody responses is overlooked
- 3 The HIV epitope identified by solving the crystallographic structure of a broadly neutralizing Mab HIV Env complex should be able when used as immunogen to elicit antibodies endowed with the same neutralizing capacity as the Mab Since every anti HIV bnMab is polyspecific the single epitope identified in the complex is not necessarily the one that elicited the bnMab Since hypermutated Mabs used in crystallographic studies differ from their germline like receptor version present before somatic hypermutation the identified epitope will not be an effective vaccine immunogen
- 4 Effective vaccine immunogenicity can be predicted from the antigenic binding capacity of viral epitopes Most fragments of a viral antigen can induce antibodies that react with the immunogen but this is irrelevant for vaccination since these antibodies rarely recognize the cognate intact antigen and even more rarely neutralize the infectivity of the viral pathogen that harbors the antigen
- 5 The rational design of vaccine immunogens using reverse vaccinology is superior to the trial and error screening of vaccine candidates able to induce protective immunity One epitope can be designed to increase its structural complementarity to one particular bnMab but such antigen design is only masquerading as immunogen design because it is assumed that antigenic reactivity necessarily entails the immunogenic capacity to elicit neutralizing antibodies When HIV Env epitopes engineered to react with a bnMab are used to select from human donors rare memory B cells secreting bnAbs this represents antigen design and not immunogen design

The aim of this Research Topic is to replace previous misleading paradigms by novel ones that better fit our current understanding of immunological specificity and will help HIV vaccine development

Climate Risk and Resilience in China Rebecca Nadin, Sarah Opitz-Stapleton, Xu Yinlong, 2015-10-14 China has been subject to floods droughts and heat waves for millennia these hazards are not new What is new is how rapidly climate risks are changing for different groups of people and sectors This is due to the unprecedented rates of socio economic development migration land use change pollution and urbanisation all occurring alongside increasingly more intense and frequent weather hazards and shifting seasons China's leadership is facing a significant challenge from conducting and integrating biophysical and social vulnerability and risk assessments and connecting the information from these to policy priorities and time frames to developing and implementing policies and actions at a variety of scales It is within this challenging context that China's

policy makers businesses and citizens must manage climate risk and build resilience This book provides a detailed study of how China has been working to understand and respond to climatic risk such as droughts and desertification in the grasslands of Inner Mongolia to deadly typhoons in the mega cities of the Pearl River Delta Using research and data from a wide range of Chinese sources and the Adapting to Climate Change in China ACCC project a research to policy project this book provides a fascinating glimpse into how China is developing policies and approaches to manage the risks and opportunities presented by climate change This book will be of interest to those studying global and Chinese climate change policy regional food water and climate risk and to policy advisors The Lived Experience of Climate Change Dina Abbott, Gordon Wilson, 2015-04-22 This book explores the idea that daily lived experiences of climate change are a crucial missing link in our knowledge that contrasts with scientific understandings of this global problem It argues that both kinds of knowledge are limiting the sciences by their disciplines and lived experiences by the boundaries of everyday lives Therefore each group needs to engage the other in order to enrich and expand understanding of climate change and what to do about it Complemented by a rich collection of examples and case studies this book proposes a novel way of generating and analysing knowledge about climate change and how it may be used The reader is introduced to new insights where the book Provides a framework that explains the variety of simultaneous co existing and often contradictory perspectives on climate change Reclaims everyday experiential knowledge as crucial for meeting global challenges such as climate change Overcomes the science citizen dichotomy and leads to new ways of examining public engagement with science Scientists are also human beings with lived experiences that filter their scientific findings into knowledge and actions Develops a public action theory of knowledge as a tool for exploring how decisions on climate policy and intervention are reached and enacted While scientists physical and social seek to explain climate change and its impacts millions of people throughout the world experience it personally in their daily lives The experience might be bad as during extreme weather engender hostility when governments attempt mitigation and sometimes it is benign This book seeks to understand the complex often contradictory knowledge dynamics that inform the climate change debate and is written clearly for a broad audience including lecturers students practitioners and activists indeed anyone who wishes to gain further insight into this far reaching issue **Public Health and Welfare: Concepts, Methodologies, Tools, and Applications** Management Association, Information Resources, 2016-09-12 The prevention and treatment of diseases is a primary concern for any nation in modern society To maintain an effective public health system procedures and infrastructure must be analyzed and enhanced accordingly Public Health and Welfare Concepts Methodologies Tools and Applications provides a comprehensive overview of the latest research perspectives on public health initiatives and promotion efforts Highlighting critical analyses and emerging innovations on an international scale this book is a pivotal reference source for professionals researchers academics practitioners and students interested in the improvement of public health infrastructures Governing Agricultural
