Smart WiFi Router, Gigabit Ethernet User's Manual Netgear Connex,2019-05-09 Unofficial User Guide The NETGEAR Nighthawk AC1750 Smart Wi Fi Router delivers extreme Wi Fi speed for gaming up to 1750Mbps The Dual Core 1GHz processor boosts wireless and wired performance High powered amplifiers and external antennas increase range for whole home mobility while Beamforming boosts speed for mobile devices up to 100% faster *Home Networks* , [Achieving Collision Avoidance and Fairness in CSMA-based Wireless Mesh Networks](#) Jung Il Choi,2011 CSMA based wireless mesh networks are vulnerable to collisions Even a single unicast flow can exhibit excessive collisions from hidden terminals Furthermore fairness objectives for single hop networks can cause undesirable behaviors for mesh networks Mesh networks of wireless sensors suffer from undesirable protocol interactions due to these challenges Inter protocol collisions and unfair channel usage between protocols cause the behavior of one protocol to change depending on other protocols These inter protocol interactions complicate the design of large sensor network systems Motivated by these problems this dissertation presents grant to send a novel collision avoidance mechanism for wireless mesh networks Rather than announce packets it intends to send a node using grant to send announces packets it expects to hear others send This dissertation provides evidence that inverting collision avoidance in this way greatly improves wireless mesh performance without significant overhead Grant to send is simple to implement and is compatible with existing hardware Grant to send is also general

enough to replace protocol specific collision avoidance mechanisms common to sensor network protocols While these individual mechanisms only avoid intra protocol collisions grant to send provides a MAC mechanism which can address both intra and inter protocol collisions This dissertation also proposes a fairness scheme for mesh networks which can be applied to protocol fairness The fairness scheme combines and modifies traditional flow based fairness techniques such as fair queueing and fair scheduling However the complexities of wireless make these mechanisms insufficient by themselves This dissertation therefore proposes two new mechanisms that address these limitations channel decay and fair cancellation and shows that the fairness scheme can significantly improve protocol fairness Together this dissertation shows that achieving collision avoidance and fairness can make mesh networks perform better more reliable and thus easier to design **Home**
