

The Negative Effects of Social Network Sites

In present day, it is admitted that Social Network Sites (SNSs) bring convenience, efficiency, fast, speed and width for adolescents' interpersonal relationship development. It also brings many difficulties to overcome. Some adolescents that are addicted to SNSs suffer a lot of mental health problems caused by Network mental disorders and Internet addiction syndrome. It brings a lot of negative impact on adolescents' mental health and social development. This study that researches the negative impacts on adolescents' interpersonal psychotherapy will significantly help colleges and universities' moral educators to play the network edge, overcome the disadvantages and make use of the Internet to cultivate adolescents' sound personalities and good psychological qualities.

SNS is also known as social network service. A SNS is an online service platform, or site that focuses on facilitating the building of social networks or social relations among people who, for example, share interests, activities, backgrounds, or real-life connections. SNSs such Facebook, Twitter works like this. Adolescents who become members of these SNSs communities, they will firstly get a personal profile which will show their personal information including the name, job, photo, relationship status, religion, hobbies and so on. "What differentiates SNS from previous media like a personal homepage is the display of one's friend" (Boyd and Ellison, 2007). Except displaying a network of friends, other users can then click on their profiles and traverse ever broadening social networks.

The three features including profile, friend and traversing friend list show the most crucial characteristic of SNSs. Currently, when adolescents create profiles, they often set unique names for themselves. Today, adolescents make use of lots of ways online to communicate with people, such as Wall Post, Status Update, Activity Feed, Thumbs Up, and Profile. These are the features of SNSs, such as Facebook and Myplace. SNS are part of a suite of Web applications, also called social media, which utilize Web 2.0 principles.

"The term Web 2.0 defines websites that are designed to: (a) rely on the participation of mass groups of users rather than centrally controlled content providers, (b) aggregate and remix content from multiple sources, and (c) more intensely network users and content together" (O'Reilly, 2007). There are a large number of adolescents using social media. For example, "a national survey in 2009 finds that 73% of online teenagers use SNS, which is an increase from 55% 3 years earlier" (Lenhart, Purcell, Smith, and Zickuhr, 2010).

The rise of network technology had a profound impact on human communication. It produces a new type of interaction between people - network contacts. Network contacts refer to interaction on the network and certain social relationships during the communication process (John December, 1996). On this basis, the subject of network

The Positive and Negative Effects of Social Media Edikan Ukpong, 2019-12-03 Essay from the year 2014 in the subject Communications, Public Relations, Advertising, Marketing, Social Media, grade B, 653 language English, abstract: The effect of Social Networks, media like Facebook, Twitter, MySpace, etc., is hard to ignore. Nigerian youth, alongside their counterpart around the globe, are fast making social media become part of their daily activities. That is why it will be of little or no wonder to see a number of youths wake up and the first port of call is to update a good morning message on Facebook or any other social network that appeals to their sense of value. This is a clear picture of the level of participation on the social network. However, technology like two sides of a coin brings with it both the negative and positive sides. Against all odds, Branston G. Stafford R. in 2010 explains that any debate arising that the effects of the social network or media should be handled from two angles of view and considered from two main attitudes so as to harness the effects objectively. on selected aspects of the migrants daily lives such as working and living conditions management of loans and savings and remittance transfer It was found that the whole migration process is mainly facilitated by transnational kin and friendship networks To grasp the geographical and social dimensions of the migrant s lives an integrative approach in joining the sustainable livelihoods approach Bourdieu s theory of practice the concept of social capital and the concept of transnational migration was developed Further results show that the majority of the migrants are male The unskilled migrants occupy a distinct niche in which men have been working as watchmen and car cleaners for generations The job market is highly organized since jobs are handed over and sold within networks If wives of migrants are in Delhi for longer periods they engage in housekeeping For financial needs migrants established their own informal savings and credit associations Although migration is firstly seen as an opportunity by the migrants it can as well perpetuate debt and dependency and entail that they remain migrants for their whole lives
