

NETGEAR

14 Mbps Wireless Access Point WG602 v3

Start Here

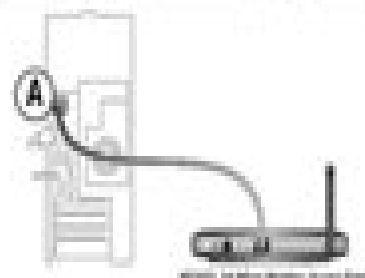

Follow these quick steps to install your WG602.

Important: The WG602 v3 firmware is not backward compatible with earlier versions of the WG602.

1 Set Up the WG602 Access Point

Tip: Before mounting the WG602 in a high location, first set up and test the WG602 to verify wireless network connectivity.

- 1 Prepare a PC with an Ethernet adapter. If this PC is already part of your network, connect its TCP/IP configuration settings.
- 2 Configure the computer with a static IP address of 192.168.0.110 and 255.255.255.0 for the Subnet Mask.
- 3 Connect an Ethernet cable from the WG602 to the PC (A).

- 4 Turn on your computer, connect the power adapter to the WG602 and verify the following:
 - 1 The power (power) light goes on.
 - 2 The LAN light of the wireless access point is lit when connected to a powered-on PC.

2 Configure LAN and Wireless Access

- 1 Configure the WG602 Extremes port for LAN access.
 - 1 Connect to the WG602 by opening your browser and entering <http://192.168.0.227> in the address field.
- 2 When prompted, enter admin for the user name and password for the password, both in lower case letters.

- 3 Click the IP Settings link and configure the IP Settings according to your network setup.
- 4 Configure the wireless interface for wireless access. See the values listed in the Understanding Basic Wireless Settings topic of the *Reference Manual* on the 14 Mbps Wireless Access Point System CD for full instructions.

Note: You must set the Regulatory Domain. It may not be legal to operate the wireless access point in a region other than that of those identified in the field.

(Now that you have finished the setup steps, you are ready to deploy the WG602 in your network. If needed, you can now reconfigure the PC you used in step 1 back to its original TCP/IP settings.)

3 Deploy the WG602 Access Point

- 1 Disconnect the WG602 and position it where you will deploy it. The best location is identified in the center of your wireless coverage area.
- 2 Lift the antenna so that it is vertical.
- 3 Connect an Ethernet cable from your WG602 Access Point to a LAN port on your router, switch, or hub.

Note: By default, the WG602 is a DHCP client. If there is no DHCP server in the network, the WG602 uses 192.168.0.227 as its IP address. If your network used different addressing, you will need to configure the WG602 accordingly.
- 4 Connect the power adapter to the wireless access point and plug the power adapter in to a power outlet. The power, LAN, and wireless lights should light up.

4 Verify Wireless Connectivity

Using a computer with an 802.11b or 802.11g wireless adapter with the correct wireless settings needed to connect to the WG602 (SSID, SSID ACL, WEP, WPA, etc.), verify connectivity by using a browser such as Internet Explorer or Internet Explorer to browse the Internet, or check for file and printer access on your network.

Note: If you cannot connect, see the Troubleshooting Tips on the next page in the *Reference Manual* on the 14 Mbps Wireless Access Point System CD.
