Patients Guide To Occlusion:

A Guide to Good Occlusal Practice Stephen Davies, 2022-06-03 This book considers occlusion within the different disciplines of clinical dentistry taking into account the challenges specific to each in order to develop guidelines of good occlusal practice. The GGOP for each discipline has benefited from an authoritative contribution of a recognised specialist in that field. Readers will find full description of what constitutes good occlusal practice in for example simple and advanced restorative dentistry, removable prosthodontics, the restoration of the worn dentition and implantology. It is clearly explained why and how the GGOP differ in the various branches of dentistry, the key point being that it is the support for the occlusal surfaces that determines GGOP. One of the foundations of this work is that an occlusion can only be judged by the tissue reactions to it; there is no such thing as an intrinsically bad occlusion or malocclusion. Today it remains the case that many dentists feel that occlusion represents an important gap in their knowledge; indeed some qualify with little more than the belief that occlusion is important. Their vulnerability in this area of clinical practice is confirmed when early cases fail to go as well as hoped. In providing comprehensive guidance on good occlusal practice in different contexts, this book will be of value for a wide range of dental practitioners.

It has evolved over the several decades and now encompasses a range of different techniques including deformation, contrast and three-dimensional imaging as well as stress echocardiography and transesophageal echocardiography.

Rational Use of Intravenous Fluids in Critically Ill Patients Manu L.N.G. Malbrain, Adrian Wong, Prashant Nasa, Supradip Ghosh, 2023-11-29 This open access book published by Springer under the Open Access CC BY 4.0 Licence in collaboration with the International Fluid Academy (IFA) www.fluidacademy.org explores rationalized intravenous fluid therapy for critically ill patients. Despite being commonly prescribed in inpatient settings, intravenous fluids are often administered without evidence-based guidelines, neglecting essential considerations such as the fact they are drugs that need proper dosing, duration, indications, contraindications, side effects and de-escalation. This book fills this knowledge gap. Each chapter starts with a clinical vignette and a related question followed by a concise summary, abstract, key learning points, main text and a conclusion that addresses the clinical question and provides relevant take-home messages. Additionally, every chapter includes an IFA commentary referencing the latest literature and evidence. The book begins with an introductory chapter that provides definitions and terminology followed by four sections. The first section covers the fundamentals of intravenous fluid therapy including fluid compartments in sick patients, fluid bolus dynamics, heart-lung interactions, fluid challenge, fluid responsiveness, arterial blood gas analysis based on traditional and Stewart concepts and electrolyte physiology relevant to clinical issues. The second section discusses commercially available intravenous fluids.

while the third section focuses on fluid therapy in specific clinical situations The final section introduces the concepts of fluid stewardship and appropriate fluid prescription Aligned with the International Fluid Academy s mission to enhance education and promote research on fluid management and monitoring ultimately improving patient survival rates this book contributes significantly to establishing fluid stewardship at the bedside It provides valuable support for physicians nurses pharmacists and other healthcare professionals across various clinical disciplines working in emergency rooms operating rooms or intensive care units aiding their everyday clinical practice
