informative articles and in depth reviews *Chips 2020* Bernd Hoefflinger, 2011-12-15 The chips in present day cell phones  
already contain billions of sub 100 nanometer transistors By 2020 however we will see systems on chips with trillions of 10  
nanometer transistors But this will be the end of the miniaturization because yet smaller transistors containing just a few  
control atoms are subject to statistical fluctuations and thus no longer useful We also need to worry about a potential energy  
crisis because in less than five years from now with current chip technology the internet alone would consume the total  
global electrical power This book presents a new sustainable roadmap towards ultra low energy femto Joule high  
performance electronics The focus is on the energy efficiency of the various chip functions sensing processing and  
communication in a top down spirit involving new architectures such as silicon brains ultra low voltage circuits energy  
harvesting and 3D silicon technologies Recognized world leaders from industry and from the research community share their  
views of this nanoelectronics future They discuss among other things ubiquitous communication based on mobile companions  
health and care supported by autonomous implants and by personal carebots safe and efficient mobility assisted by co pilots  
equipped with intelligent micro electromechanical systems and internet based education for a billion people from  
kindergarden to retirement This book should help and interest all those who will have to make decisions associated with
