

POGIL: Le Chatelier's Principle

Why?

When opposing forces or issues are balanced, a system is said to be in equilibrium. In biology class you called this "maintaining homeostasis" for living systems or organisms. Placing a stress on any equilibrium system, whether it is chemical, biological, societal, environmental, or personal, causes the equilibrium to be disrupted.

Le Chatelier's Principle allows us to predict the results that follow from "stressing," or in other words, changing the conditions of a system at chemical equilibrium. This allows scientists to develop techniques to control chemical reactions in natural and industrial settings in order to obtain desired products.

MODEL #1: Disrupting an Equilibrium

The graph below represents a sealed system that starts at equilibrium, and is then disrupted when hydrogen gas is injected into the it (increasing H_2 concentration).

According to LeChatelier's principle, the addition of hydrogen gas disrupts the equilibrium system. The graph shows how the system responds to the disturbance of the added hydrogen gas.

QUESTIONS

1. What information on the graph indicates that the system was initially at equilibrium?
2. What information on the graph shows the system was disrupted?
3. By studying the graph, what caused the disruption? (HINT: Look at the concentration information for each substance.)
