1. The product of the reaction above is called a "dipeptide".
 - a. Which two functional groups are involved in this reaction? Circle and label these two groups on the reactants. **Carboxyl and amino group**
 - b. Circle and label the new **peptide bond** formed between the two amino acids.
 - c. Does a peptide bond involve the amino acid "**backbone**" or **R-groups**? (Circle one.)
 - d. Draw a square around each **amino acid** in the dipeptide. An amino acid that is part of a polypeptide chain is referred to as a "**residue**."
 - e. Label the "**N-terminus**" and the "**C-terminus**" (also known as the amino- and carboxy-termini) of the dipeptide molecule. ("terminus"="end")
2. The addition (**polymerization**) of amino acid **monomers** is directional, with new amino acids added only onto the C-terminus of the growing polypeptide chain.

- a. Draw a **tripeptide** by redrawing the dipeptide from the image above and include the third amino acid shown to the right.
- b. Circle the **peptide bonds** and label the "**N-terminus**" and the "**C-terminus**" of your tripeptide.
- c. Assign each term: **charged**, **nonpolar**, and **polar** to the correct R-group in your tripeptide.
- d. Two of your R-groups are **hydrophilic** and can form **hydrogen bonds** with water. Draw two H₂O molecules interacting with your tripeptide, using dotted lines to represent the hydrogen bonds. Label the partial charges of the atoms involved in each hydrogen bond you draw.

Protein Structure Harold A. Scheraga, 2014-07-01 Protein Structure deals with the chemistry and physics of biologically important molecules the proteins particularly the determination of the structure of various proteins their thermodynamics their kinetics and the mechanisms of different reactions of individual proteins The book approaches the study of protein structure in two ways firstly by determining the general features of protein structure the overall size and shape of the molecule and secondly by investigating the molecule internally along with the various aspects of the internal configuration of protein molecules It describes in detail experimental methods for determining protein structure in solution such as the hydrodynamic method the thermodynamic optical method and the electrochemical method The book then explains the results of experiments carried out on insulin lysozyme and ribonuclease The text notes that the experiments carried out on native and denatured proteins as well as on derivatives prepared by chemical modification e g by methylation iodination acetylation etc can lead to greater understanding of secondary and tertiary structures of proteins of known sequence The book is suitable for biochemists micro biologists cellular researchers or investigators involved in protein structure and other biological sciences related to muscle physiologists geneticists enzymologists or immunologists

The Physical Foundation of Protein Architecture Nobuhiko Saito, Yukio Kobayashi, 2001 A protein requires its own three dimensional structure for its biological activity If a chemical agent is added the biological activity is lost and the three dimensional structure is destroyed to become a random coil state But when the chemical agent is removed the biological activity is recovered implying that the random coil state turns back into the original complex structure spontaneously This is an astonishing event The Physical Foundation of Protein Architecture is intended to solve this mystery from the physicochemical basis by elucidating the mechanism of various processes in protein folding The main features of protein folding are shown to be described by the island model with long range hydrophobic interaction which is capable of finding the specific residue and the lampshade criterion for disulfide bonding Various proteins with known structure are refolded with the purpose of uncovering the mechanism of protein folding In addition ab initio method for predicting protein structure from its amino acid sequence is proposed

Protein Structure-Function Relationships in Foods Rickey Y. Yada, R.L. Jackman, 2012-12-06 Food proteins constitute a diverse and complex collection of biological macro molecules Although contributing to the nutritional quality of the foods we consume proteins also act as integral components by virtue of their diverse functional properties The expression of these functional properties during the preparation processing and storage of foods is largely dictated by changes to the structure or structure related properties of the proteins involved Therefore germane to the optimal use of existing and future food protein sources is a thorough understanding of the nature of the relationships between structure and function It is the goal of this book to aid in better defining these relationships Two distinct sections are apparent firstly those chapters which address

structure function relationships using a variety of food systems as examples to demonstrate the intricacies of this relationship and secondly those chapters which discuss techniques used to either examine structural parameters or aid in establishing quantitative relationships between protein structure and function The editors would like to thank all contributors for their assistance co operation and above all their patience in putting this volume together and the following companies organizations for their financial support without which it would not have been the success it was Ault Foods Limited Best Foods Canada Limited Natural Sciences and Engineering Research Council of Canada Ontario Ministry of Agriculture and Food Quest International Canada Inc and University of Guelph R Y Y R LJ **Protein Structure** Thomas E.
