

Calorimetry

What is calorimetry? How does it measure heat energy and temperature?

When a substance is heated, the temperature of that substance increases. Will the temperature of every other different substance be heated identical temperature increase? Will the same amount of energy be needed to raise identical temperature increase in different amounts of the same substance? In this practice you will explore how mass, temperature, heat energy, and the type of substance are related.

Model 1 – A Plot of Mass

Calorimetry

How much heat energy is transferred per second?

1. In Model 1, which substance had the most grams of water? 100g

2. Compare the graphs/curves in Model 1.

a. How many total joules of energy were added to the temperature? 100,000 J

b. How many total joules of energy were added to the temperature? 100,000 J

c. In Model 1, which substance had the highest mass? Which substance had the lowest mass? Explain your reasoning.

Why? Explain how mass, temperature, amount of heat energy, and the type of substance are related. Write formulas for each related relationship. Energy = mass x temperature change
