

Vapour Pressure Curves

DEFINITION

The vapour pressure of a substance depends on the temperature (Boyle's temperature leads to Boyle's vapour pressure). A liquid boils when the vapour pressure equals the atmospheric pressure. Water boils at 100°C at sea level but the pressure changes with altitude so at higher altitudes water boils at lower temperatures. Water at sea level boils at a different temperature. Various substances boil at different points (the boiling point) because they have high vapour pressure.
