**Agile Java Development with Spring, Hibernate and Eclipse** Anil Hemrajani, 2006-05-09 Agile Java™ Development With Spring Hibernate and Eclipse is a book about robust technologies and effective methods which help bring simplicity back into the world of enterprise Java development The three key technologies covered in this book the Spring Framework Hibernate and Eclipse help reduce the complexity of enterprise Java development significantly Furthermore these technologies enable plain old Java objects POJOs to be deployed in light weight containers versus heavy handed remote objects that require heavy EJB containers This book also extensively covers technologies such as Ant JUnit JSP tag libraries and touches upon other areas such as logging GUI based debugging monitoring using JMX job scheduling emailing and more Also Extreme Programming XP Agile Model Driven Development AMDD and refactoring are methods that can expedite the software development projects by reducing the amount of up front requirements and design hence these methods are embedded throughout the book but with just enough details and examples to not sidetrack the focus of this book In addition this book contains well separated subjective material opinion sidebars comic illustrations tips and tricks all of which provide real world and practical perspectives on relevant topics Last but not least this book demonstrates the complete lifecycle by building and following a sample application chapter by chapter starting from conceptualization to production using the technology and processes covered in this book In summary by using the technologies and methods covered in this book the reader will be able to effectively develop enterprise class Java applications in an agile manner

Scientific Software Design Damian Rouson, Jim Xia, Xiaofeng Xu, 2011-04-29 The authors analyze how the structure of a package determines its developmental complexity according to such measures as bug search times and documentation information content The work presents arguments for why these issues impact solution cost and time more than does scalable performance The final chapter explores the question of scalable execution and shows how scalable design relates to scalable execution The book's focus is on program organization which has received considerable attention in the broader software engineering community where graphical description standards for modeling software structure and behavior have been developed by computer scientists These discussions might be enriched by engineers who write scientific codes This book aims to bring such scientific programmers into discussion with computer scientists The authors do so by introducing object oriented software design patterns in the context of scientific simulation

NET Gunther Lenz, Thomas Moeller, 2004 bull There are many books on Software Engineering and many books on NET but this is the first to bring them together bull

The authors use an extended case study with each chapter building on the previous one involving readers at every stage. By the end the reader has created a really cool working imaging application while learning best practices of software development in NET.

Graph Drawing Guiseppe Liotta, 2004-03-04 The 11th International Symposium on Graph Drawing GD 2003 was held on September 21-24 2003 at the Università degli Studi di Perugia Perugia Italy. GD 2003 attracted 93 participants from academic and industrial institutions in 17 countries. In response to the call for papers the program committee received 88 refereed submissions describing original research and/or system demonstrations. Each submission was reviewed by at least 4 program committee members and comments were returned to the authors. Following extensive email discussions the program committee accepted 34 long papers (12 pages each) in the proceedings and 11 short papers (6 pages each) in the proceedings. Also 6 posters (2 pages each) in the proceedings were displayed in the conference poster gallery. In addition to the 88 submissions the program committee also received a submission of special type one that was not competing with the others for a time slot in the conference program and that collects selected open problems in graph drawing. The aim of this paper, which was refereed with particular care, is to stimulate future research in the graph drawing community. The paper presents 42 challenging open problems in different areas of graph drawing and contains more than 120 references. Although the length of the paper makes it closer to a journal version than to a conference extended abstract we decided to include it in the conference proceedings so that it could easily reach in a short time the vast majority of the graph drawing community.
