Service Catalog Of Service Provider:

The Service Catalog Mark O'Loughlin, 2010-07-13 The Service Catalog means many different things to many different people. However, most would agree that a catalog that helps customers and users to quickly identify the services they require clearly adds value. In turn, this helps organizations identify key services that support business processes, understand the contribution made by those services, and manage them appropriately. This well-constructed book provides practical advice and information that will help organizations to understand how to design and develop a service catalog and to understand the role that the service catalog performs within the service portfolio. Readers will gain practical information and knowledge that will help with understanding the full concept of the service catalog, understanding the scope of the service catalog, building an appropriate service catalog for your organization, identifying the true value that the service catalog can deliver to your organization, understanding services and the value that they provide to your organization, and customers managing the service catalog. In addition, a complete service catalog schematic is provided, and the service portfolio pyramid, which is unique to this book, is introduced, showing how all the pieces of the puzzle fit together. Widely researched and reviewed by some of the world's leading experts, this book provides a down-to-earth and practical resource for not only those who are developing Service Catalogs for the first time but also for those looking to refine their services according to agreed and established best practice concepts.

Collaborative Networks and Their Breeding Environments Luis M. Camarinha-Matos, Hamideh Afsarmanesh, Angel Ortiz, 2006-03-09 Progress in collaborative networks continues showing a growing number of manifestations and has led to the acceptance of Collaborative Networks CN as a new scientific discipline Contributions to CN coming from multiple reference disciplines has been extensively investigated In fact developments in CN have benefited from contributions of multiple areas namely computer science computer engineering communications and networking management economy social sciences law and ethics etc Furthermore some theories and paradigms defined elsewhere have been suggested by several research groups as promising tools to help define and characterize emerging collaborative organizational forms Although still at the beginning of a long way to go there is a growing awareness in the research and academic world for the need to establish a stronger theoretical foundation for this new discipline and a number of recent works are contributing to this goal From a utilitarian perspective agility has been pointed out as one of the most appealing characteristics of collaborative networks to face the challenges of a fast changing socio economic context However during the last years it became more evident that finding the right partners and establishing the necessary preconditions for starting an effective collaboration process are both costly and time consuming activities and therefore an inhibitor of the aimed agility Among others obstacles include lack of information e g non availability of catalogs with normalized profiles of organizations and lack of preparedness of organizations to join the collaborative process Overcoming the mismatches resulting from the heterogeneity of potential partners e g differences in infrastructures corporate culture methods of work and business practices requires considerable investment Building trust a pre requisite for any effective collaboration is not straight forward and requires time Therefore the effective creation of truly dynamic collaborative networks requires a proper context in which potential members are prepared to rapidly get engaged in collaborative processes The concept of breeding environment has thus emerged as an important facilitator for wider dissemination of collaborative networks and their practical materialization The PRO VE 05 held in Valencia Spain continues the 6th event in a series of successful working conferences on virtual enterprises This book includes selected papers from that conference and should become a valuable tool to all of those interested in the advances and challenges of collaborative networks
