Qualcomm looks to the future with complete HSDPA solution

CDMA-chipset supplier Qualcomm might have given a glimpse to the world with the announcement last week of an HSDPA-enabled solution that is due to ship in sample quantities in 2005. According to industry watchers, gaining an early lead in the market will be critical in the long term, with analysts predicting that HSDPA will come of age by 2006 or 2007.

Qualcomm says its MSM6275 solution will offer peak data rates of 7.2Mbps across GPRS, EDGE, WCDMA and HSDPA networks. The chipset is pin-compatible with Qualcomm's MSM6275 product, which means that handset and software platforms can be shared in order to ease certification and development times.

With high data rates perceived to be the name of the mobile industry because they offer the ability to deploy multimedia services, Qualcomm has geared the MSM6275 to work with QVGA and QVGA resolution video, locally and remote. Other multimedia capabilities include MPEG-4 decode and encode, 2D/3D graphics support for gaming, and support for streaming videos up to 4

megabits per second functions.

The chipset forms part of an overall solution covering network and system handsets that includes the U.S.-based firm's RFB275 processor, RFB275 diversity receiver and PM6275 power/thermo-management solutions.

The RFB275 receiver has been specially developed in conjunction with the MSM6275 for HSDPA and builds on the firm's RFB275 solution, which was announced at the same time. The RFB chip uses CDMA digital process technology that is common to the component industry. The chip includes a second receiver for HSDPA that Qualcomm says provides improved signal reception to enable higher data throughput, which, it claims, gives the product the ability to enable up to 348-mbps diversity gain. In addition, the receiver, 40 per-Qual Flat Flat Low RFB chip, supports a GPS receiver, making it suitable for device shipping to the U.S. and other markets where emergency location services are mandatory.

Motorola aims to 'own' UMTS-handset market

U.S. vendor Motorola aims to become the dominant player in the dual-band UMTS handset market by next year as it uses next-generation platforms to gain 20-30% market share. "In 2005, we want to own the market," said Wend Vonnahme, senior manager of 3G product operations at Motorola Personal Communications Sector. "We are working with a lot of network partners, and they are working with them to find enough partners with."

Motorola started shipping UMTS handsets in late 2002 and, according to Vonnahme, had shipped more than 750,000 by end-March. In fact, the vendor shipped a total of 850,000 units in 1Q04 alone - mainly as 1.8GHz 3G.

This year, Vonnahme says Motorola will use various 3G network platforms and drive down the size, weight and battery-life indicators of terminals (see fig.1). "We're going there," he said. In 2002, UMTS handsets were 140% the size of a GSM unit. That figure had fallen to 140% in 2003 and 140% this year, and going to improve to be reached next year.
