Recarbonization of the Biosphere Rattan Lal, Klaus Lorenz, Reinhard F. Hüttnl, Bernd Uwe Schneider, Joachim von Braun, 2012-03-28 Human activities are significantly modifying the natural global carbon C cycles and concomitantly influence climate ecosystems and state and function of the Earth system. Ever increasing amounts of carbon dioxide CO₂ are added to the atmosphere by fossil fuel combustion but the biosphere is a potential C sink. Thus a comprehensive understanding of C cycling in the biosphere is crucial for identifying and managing biospheric C sinks. Ecosystems with large C stocks which must be protected and sustainably managed are wetlands, peatlands, tropical rainforests, tropical savannas, grasslands, degraded, desertified lands, agricultural lands, and urban lands. However, land based sinks require long term management and a protection strategy because C stocks grow with a progressive improvement in ecosystem health.

Learning From Others Diane Shorrocks-Taylor, Edgar W. Jenkins, 2005-12-20 Diane Shorrocks-Taylor, School of Education, University of Leeds, UK. In September 1998 a conference was held at the University of Leeds entitled 'International comparisons of pupil performance: issues and policy'. It was arranged by two groups within the School of Education at the University: the newly formed Assessment and Evaluation Unit and the Centre for Studies in Science and Mathematics Education. The joint interest in international comparisons of performance had itself arisen from earlier involvement in a follow up study of the 1995 TIMSS work in England, reported in a later chapter in this book, in which the TIMSS assessment outcomes were studied alongside the outcomes from the National Curriculum testing programme in England. Some of the results of this investigation had proved both interesting and challenging so the decision was made to promote wider discussion of some key issues by inviting contributors from all over the world to a meeting, the major aims of which were to promote an exploration of the theoretical foundations of international comparative studies of student performance, the practical problems of carrying out such studies, the appropriateness of the assessment models and approaches used in

international comparisons the role of international comparative studies in raising standards of student performance and how international studies affect the shaping of national policy on education
