

Calculating pH

How will it be used for the concentration differences here?

Why?

As buffers and other substances control pH in organisms, it is important to understand the ability of buffers to resist change. This property is called **buffering capacity** and is usually expressed as millimoles per liter of buffer that will resist a 1 pH unit change. This value is usually being compared to the amount that is pH of 7 or around, before it would reach above 7 or below 7 (acidic) when the concentration changes only in a particular amount.
