

Name: _____

Section: _____

1. You have sampled a population in which you know that the percentage of the homozygous recessive genotype (aa) is 16%. Doing that, let's just assume, that the population is under Hardy-Weinberg conditions, in the following:

- a. The frequency of the "a" genotype:

Since the homozygous recessive is 16% (given as the frequency of aa), q^2

- b. The frequency of the "a" allele:

Since we can assume Hardy-Weinberg, the frequency of the "a" allele, as given by the frequency p^2 ($p^2 + q^2 = 1$), is the square root of 0.16 = 0.4. ($q^2 = 0.16$, so $q =$ square root of 0.16 = 0.4)

- c. The frequency of the "A" allele:

Using the formula $p + q = 1$, and knowing that $q = 0.4$ from above, $p = 1 - q = 1 - 0.4 = 0.6$

- d. The frequency of the genotypes "AA" and "Aa."

Using the Hardy-Weinberg, $AA = p^2 = (0.6)^2 = 0.36$, $Aa = 2pq = 2(0.6)(0.4) = 0.48$. Remember that, to check your work, the frequencies of AA , Aa , and aa have to add up to 1. If not, you made a math error. (Just's add: $0.36 + 0.48 + 0.16 = 1$. FINE!)

- e. The frequencies of the two possible phenotypes if "A" is completely dominant over "a."

The phenotypes are "dominant" and "recessive." We know that "recessive" comes from genotype aa , which has frequency 0.16. "Dominant" must be the two genotypes AA and Aa , so $1 - 0.16 = 0.84$. You could also add the frequencies of AA to the frequency of Aa = $0.36 + 0.48 = 0.84$.

Johnson,1995-12-31 Solution and Reaction Calorimetry Merritt M. Birky,1961 Animal and Human Calorimetry J. A.
McLean,G. Tobin,1987 This volume provides a comprehensive survey of the theory practice and techniques of calorimetry as
applied to the study of energy metabolism in humans and animals Calorimetry is used to estimate nutritional requirements of
man and farm livestock and to evaluate different foods It is also a powerful tool used in research into fundamental nutritional
and physiological life processes and in the evaluation of stresses imposed by abnormal or severe environments It is currently
being applied in various branches of medical research and can be used as a diagnostic tool in hospitals for investigation of
metabolic disorders The authors discuss both direct calorimetry which measures heat loss directly and indirect calorimetry
where heat loss is inferred by measurement of some of the chemical byproducts of metabolism In addition guidance is
provided to the instrumentation technical problems and precautions necessary to obtain accurate calorimetric measurements
Handbook of Thermal Analysis and Calorimetry: Recent advances, techniques and applications ,1998 Clinical
