

The Hardy-Weinberg Equations

What makes stable populations where the size doesn't change possible?

Why?

Genetic changes require genetic drift or genetic selection, processes that are affecting some of the genes in the population & therefore require changes in the genetic composition of the population or reproductive success within the population might have the better chance. For that, we need to have the conditions of the Hardy-Weinberg equation to be met. Otherwise, genetic drift or genetic selection will affect the allele frequency of two alleles in a population.
