Daugherty,2020-07-26 Traditionally industrial hygienists and environmental engineers have been responsible for conducting chemical exposure assessments however this task is now becoming a team effort taken on by scientists businessmen and policymakers Assessment of Chemical Exposures Calculation Methods for Environmental Professionals addresses the expanding scope of exposure assessments in both the workplace and environment It discusses the basics of gathering data and assessing exposure including how to estimate exposure to chemicals using fundamental chemical engineering concepts The book opens with a brief discussion on the history of exposure assessments and provides terms and nomenclature needed for communications between various disciplines involved in exposure assessments The potential impact of chemical exposures on humans the environment and communities is discussed in detail The book also addresses modeling source generation pathway transport and receptor impact With the clear explanations presented in this text even a novice will be able to practice the art of exposure assessment The evolution of automotive technology Gijs Mom,2023-05-17 The idea of understanding the present through its history is based on two insights First it helps to know where a technology comes from what were its predecessors how did they evolve as a result of the continuous efforts to solve theoretical and practical problems who were crucial in their emergence and which cultural differences made them develop into divergent families of artifacts Second and closely related to the first insight how does a certain technology or system fit into its societal context its culture of mobility its engineering culture its culture of car driving its alternatives its opponents Only thus by studying its prehistory and its socio cultural context can we acquire a true grasp of a technology The Evolution of Automotive Technology

A Handbook Second Edition covers one and a quarter century of the automobile conceived as a cultural history of its technology aimed at engineering students and all those who wish to have a concise introduction into the basics of automotive technology and its long term development ISBN 9781468605976 ISBN 9781468605969 ISBN 9781468605983 DOI 10.4271/9781468605976 2nd Edition

Chemistry of High-Energy Materials Thomas M. Klapötke, 2022-08-01 Chemistry of High Energy Materials continues in this new and revised 6th edition to provide fundamental scientific insights into primary and secondary explosives propellants rocket fuels and pyrotechnics It expands with new research developments including new melt casts reactive structure materials a computational study on the detonation velocity of mixtures of solid explosives with non explosive liquids calculation of craters after explosions This work is of interest to advanced students in chemistry materials science and engineering as well as to all those working in military and defense technology

Mixture Formation in Internal Combustion Engines Carsten Baumgarten, 2006-09-28 A systematic control of mixture formation with modern high pressure injection systems enables us to achieve considerable improvements of the combustion process in terms of reduced fuel consumption and engine out raw emissions However because of the growing number of free parameters due to more flexible injection systems variable valve trains the application of different combustion concepts within different regions of the engine map etc the prediction of spray and mixture formation becomes increasingly complex For this reason the optimization of the in cylinder processes using 3D computational fluid dynamics CFD becomes increasingly important In these CFD codes the detailed modeling of spray and mixture formation is a prerequisite for the correct calculation of the subsequent processes like ignition combustion and formation of emissions Although such simulation tools can be viewed as standard tools today the predictive quality of the sub models is constantly enhanced by a more accurate and detailed modeling of the relevant processes and by the inclusion of new important mechanisms and effects that come along with the development of new injection systems and have not been considered so far In this book the most widely used mathematical models for the simulation of spray and mixture formation in 3D CFD calculations are described and discussed In order to give the reader an introduction into the complex processes the book starts with a description of the fundamental mechanisms and categories of fuel injection spray break up and mixture formation in internal combustion engines
