FitzRoy,Elissaios Papyrakis,2016-04-14 The 2nd edition of An Introduction to Climate Change Economics and Policy explains the key scientific economic and policy issues related to climate change in a completely up to date introduction for anyone interested and students at all levels in various related courses including environmental economics international development geography politics and international relations FitzRoy and Papyrakis highlight how economists and policymakers often misunderstand the science of climate change underestimate the growing threat to future civilization and survival and exaggerate the costs of radical measures needed to stabilize the climate In contrast they show how direct and indirect costs of fossil fuels particularly the huge health costs of local pollution actually exceed the investment needed for transition to an almost zero carbon economy in two or three decades using available technology **Food Fight** McKay Jenkins,2018-02-13 Are GMOs really that bad A prominent environmental journalist takes a fresh look at what they actually mean for our food system and for us In the past two decades GMOs have come to dominate the American diet Advocates hail them as the future of food an enhanced method of crop breeding that can help feed an ever increasing global population and adapt to a rapidly changing environment Critics meanwhile call for their banishment insisting GMOs were designed by overeager scientists and greedy corporations to bolster an industrial food system that forces us to rely on cheap unhealthy processed food so they can turn an easy profit In response health conscious brands such as Trader Joe s and Whole Foods have started boasting that they are GMO free and companies like Monsanto have become villains in the eyes of average consumers Where can we turn for the truth Are GMOs an astounding scientific breakthrough destined to end world hunger Or are they simply a way for giant companies to control a problematic food system Environmental writer McKay Jenkins traveled across the country to answer these questions and discovered that the GMO controversy is more complicated than meets the eye He interviewed dozens of

people on all sides of the debate scientists hoping to engineer new crops that could provide nutrients to people in the developing world Hawaiian papaya farmers who credit GMOs with saving their livelihoods and local farmers in Maryland who are redefining what it means to be sustainable The result is a comprehensive nuanced examination of the state of our food system and a much needed guide for consumers to help them make more informed choices about what to eat for their next meal
