King,Dileni Gunewardena,2022-11-25 The role of cognitive and socioemotional skills alongside education in determining people s success in the labour market has been the topic of a growing body of research but previous studies have mostly missed middle income countries and the developing world because measures of those skills and data on employment and earnings on large enough samples of adults have typically not been available Using comparable survey data on these schooling skills and labour market outcomes from 13 developing and emerging economies worldwide this book revisits

human capital and gender inequality models It presents new estimates of the returns to different levels of schooling as well as cognitive and socioemotional skills for women and men It examines whether those returns are due to levels of human capital or to structural bias in labour markets and how these two factors work across the earnings spectrum The book examines the existence of glass ceilings and sticky floors for women using this expanded measure of human capital Further by analyzing a group of countries of wide ranging levels of economic development and socio political contexts the book reveals patterns and insights into how context mediates the relationship between skills and gender gaps in labour market outcomes This book will be of interest to scholars of human capital and gender inequality in the labour market and development economics as well as gender and development policy makers
