Cognitive Systems Engineering Jens Rasmussen, Annelise Mark Pejtersen, L. P. Goodstein, 1994-08-16 Powerful information technologies and the complex support systems they engender are evolving faster than people's ability to adjust to them In the workplace this leads to troublesome task performance added stress on users increased organizational inefficiency and in some cases a heightened risk of wide scale disaster In the marketplace it makes for consumer dissatisfaction Clearly traditional human computer interaction HCI and system design SD solutions to this dilemma have proven woefully inadequate What is needed is a fresh multidisciplinary approach offering a broader more dynamic framework for assessing needs and designing usable efficient systems Taking modeling concepts from engineering psychology cognitive science information science and computer science cognitive systems engineering CSE provides such a framework This book is the first comprehensive guide to the emerging new field of CSE Providing equal parts theory and practice it is based on the authors many years of experience with work systems in a wide range of work domains including process control manufacturing hospitals and libraries Throughout the emphasis is on powerful analytical techniques that enhance the systems designer's ability to see the big picture and to design for all crucial aspects of human work interaction Applicable to highly structured technical systems such as process plants as well as less structured user driven systems like

libraries these analytical techniques form the basis for the evaluation and design guidelines that make up the bulk of this book And since the proof is in the pudding the authors provide a chapter length case history in which they demonstrate the success of their approach when applied to a full scale software design project The project a retrieval system for public libraries is described in detail from field studies to concept validation experiments and of course the empirical evaluation of the system while in use by the library users and personnel Computer based information systems are rapidly becoming a fundamental part of the human landscape How that landscape evolves over the next decade or so whether it becomes a hostile one or one that generously supports the needs of future generations is in the hands of all those involved with the study and design of information systems *Forthcoming Books* Rose Arny,1999 *Black Family Today* ,1998 Subject
