Separation Of A Dye Mixture Using Chromatography Flinn

James M. Miller

Separation Of A Dye Mixture Using Chromatography Flinn:

Journal of Applied Chemistry, 1970 **Separation and Identification of Complex Mixtures Using Chromatography**
Mass Spectrometry Hannah Lynn Barks, 2010 Here for the first time the formation of adenine hypoxanthine and guanine from formamide solutions with heating only to 130 degrees C and UV irradiation in the absence of minerals or inorganic salts is shown using LC MS MS as the analysis technique The thesis goes on to demonstrate that the product distributions change drastically when the temperature is increased to 160 degrees C from 130 degrees C specifically that the amount of hypoxanthine increases with the addition of UV light and the amount of adenine increases with an increase in temperature Along with showing the formation of purines in these reactions the identification of pyrimidines was also achieved by GCxGC MS GCxGC MS was also used to study additional samples specifically bio oils where the type of compounds in the samples were easily identifiable which allowed for a direct comparison between different types of bio oils e g Douglas fir bark Southern pine bark and a Southern pine bark wood mixture **The Optimized Separation of Direct Blue 199 Dye Using High-performance Liquid Chromatography** Nicole Terese Ritchard, 2001 **Separation Methods in Chemical Analysis** James M. Miller, 1974
