Nanodevices Constructed by DNA Origami Technology Yangyang Yang, 2015-12-16 In this book the author deals mainly with two topics 1 single molecule visualization of switching behaviors in the DNA nanoframe system utilizing different kinds of molecular switches through the use of high speed atomic force microscope AFM 2 construction of photocontrollable DNA nanostructures in programmed patterns and direct visualization of the dynamic assembling process Here high speed AFM was employed to observe the dynamic movements of single molecules Compared to a traditional single molecule analysis method such as fluorescence spectroscopy or electron microscopy high speed AFM makes possible the real time observation of molecule behaviors DNA nanostructures were designed and assembled as scaffolds to incorporate interested biomolecules The observations were carried out under robust conditions without complicated pretreatment Moreover the photoresponsive molecules were successfully assembled into around 100 nm sized DNA nanostructures The assembly disassembly of nanostructures can be regulated reversibly by photoirradiation This book explains how DNA origami has gradually become a useful tool for the investigation of biochemical interactions in defined nanospace It also shows the possibility of DNA nanostructures acting as nanodevices for application in biological systems serving as a good introduction to basic DNA nanotechnology Structural DNA Nanotechnology Nadrian C.
