problems first diagnosis of the student's current level of understanding or performance and second selection of the appropriate intervention that will transition the student toward expert performance Containing a comprehensive set of principled approaches to automated instruction diagnosis and remediation it is the first volume on the topic to provide specific detailed guidance on how to develop these systems Leading researchers and practitioners represented in this book address the following questions in each chapter What is your approach to cognitive diagnosis for automated instruction What is the theoretical basis of your approach What data support the utility of the approach What is the range of applicability of your approach What knowledge engineering or task analysis methods are required to support your approach Referring to automated instruction as instruction that is delivered on any microprocessor based system the contributors to and editors of this book believe that is it possible for automated instructional systems to be more effective than they currently are Specifically they argue that by using artificial intelligence programming techniques it is possible for automated instructional systems to emulate the desirable properties of human tutors in one on one instruction Motor Maintenance Data Book and Flat-rate Manual B.
