Chemistry James E. Brady, Fred Senese, 2004-02-04 Publisher Description

Energetics of Organometallic Species José A. Martinho Simões, 2012-12-06 An overview of modern organometallic thermochemistry made by some of the most active scientists in the area is offered in this book. The contents correspond to the seventeen lectures delivered at the NATO ASI Energetics of Organometallic Species, Curia Portugal, September 1991, plus three other invited contributions from participants of that summer school. These papers reflect a variety of research interests and discuss results obtained with

several techniques It is therefore considered appropriate to add a few preliminary words attempting to bring some unity out of that diversity In the first three chapters results obtained by classical calorimetric methods are described Modern organometallic thermochemistry started in Manchester with Henry Skinner and his pioneering work is briefly surveyed in the first chapter The historical perspective is followed by a discussion of a very actual issue the trends of stepwise bond dissociation enthalpies Geoff Pilcher another Manchester thermochemist makes in chapter 2 a comprehensive and authoritative survey of problems found in the most classical of thermochemical techniques combustion calorimetry applied to organometallic compounds Finally results from another classical technique reaction solution calorimetry are reviewed in the third chapter by Tobin Marks and coworkers More than anybody else Tobin Marks has used thermochemical values to define synthetic strategies for organometallic compounds thus indicating an application of thermochemical data of which too little use has been made so far **Modern Chemistry** Holt Rinehart & Winston, Holt, Rinehart and Winston Staff, 2001
