Livingstone, 2009. **Uncomputable**, Alexander Galloway, 2021-11-02. A journey through the uncomputable remains of computer history. Narrating some lesser-known episodes from the deep history of digital machines, Alexander R. Galloway explains the technology that drives the world today and the fascinating people who brought these machines to life. With an eye to both the computable and the uncomputable, Galloway shows how computation emerges or fails to emerge, how the digital thrives but also atrophies, how networks interconnect while also fray and fall apart. By rebuilding obsolete technology using today's software, the past comes to light in new ways, from intricate algebraic patterns woven on a hand loom to striking artificial life simulations to war games and back boxes. A description of the past, this book is also an assessment of all that remains uncomputable as we continue to live in the aftermath of the long digital age. **Advanced Concepts for Intelligent Vision Systems**, Jacques Blanc-Talon, Don Bone, Wilfried Philips, Dan Popescu, Paul Scheunders, 2010-12-06. This volume collects the papers accepted for presentation at the 12th International Conference on Advanced Concepts for Intelligent Vision Systems (ACIVS 2010). Following the first meeting in Baden-Baden, Germany, in 1999, which was part of a large multi-conference, the ACIVS conference then developed into an independent scientific event and has ever since maintained the tradition of being a single-track conference. ACIVS 2010 attracted computer scientists from 29 different countries, mostly from Europe, Australia and the USA, but also from Asia. Although ACIVS is a conference on all areas of image and video processing, submissions tend to gather within certain major fields of interest. This year, 3D and depth processing and computer vision and surveillance were
