Research Methods 1 Leow Chee Seng,Khairul Salleh bin Mohamed Sahari,Vellapandian Ponnusamy,2022-07-31 Graduate on time GOT has become the holy grail of success in the world of post graduate education The majority of students who enrol in a postgraduate research programme have a strong desire to learn Motivation on the other hand tends to decline on a regular basis Furthermore students give up on their education when they cannot see the light at the end of the tunnel In contrast to the students who chose to withdraw from their programmes we have encountered thousands of post graduate students who are able to complete their degrees on time We were aware of their predicament and the difficulties they were experiencing in their graduate studies Simply put students who are unable to complete their studies are unable to do so due to both the students and the supervisors Keep in mind that other errors can be easily identified As a result the supervisors ability to effectively supervise students has a significant impact on the students ability to graduate

Naturally it is the students responsibility to be self motivated and consistent in their approach to their studies The student dropout rate is directly related to a lack of participation and collaboration on the part of any party including supervisors and students This book was written with the intention of assisting and guiding academicians as well as post graduate students through the process of completing their educations The most important thing is that students have fun while learning new things and feel like they are contributing to the overall body of knowledge We designed and crafted the book s content based on our previous experiences in order to assist students in organising their academic pursuits in a methodical manner

and Declines Roger A. Dixon, Lars Bäckman, Lars Backman, 2013-06-17 The concept of compensation in psychology refers to processes through which a gap or mismatch between current accessible skills and environmental demands is reduced or closed These gaps can be principally the result of losses such as those associated with aging or interpersonal role changes injuries such as those that may occur to the neurological or sensory systems organic or functional diseases such as the dementias or schizophrenia and congenital deficits such as those apparent in autism or some learning disabilities Whether the demand skill gaps can be bridged completely reduced only moderately or are impossible to close depends on a variety of factors In every case however the guiding notions of compensation are that some such deficits may be amendable the continuation of the effects of the gap may be avoidable and some functioning may be recoverable In this sense compensation is related to adaptation it is about overcoming deficits managing the effects of losses and promoting improvement in psychological functioning Compensation is a concept that has a long and rich history in numerous domains of psychological research and practice To date however few of the relevant research domains have benefitted explicitly or optimally from

considering alternative perspectives on the concept of compensation Although researchers and practitioners in several areas of psychology have actively pursued programs with compensation as a central concept communication across disciplinary divides has been lacking Comparing and contrasting the uses and implications of the concept across neighboring and even not so adjacent areas of psychology can promote advances in both theoretical and practical pursuits The goal of this book is to carry inchoate integrative efforts to a new level of clarity To this end the editors have recruited major authors from selected principal areas of research and practice in psychological compensation The authors review the current state of compensation scholarship in their domains of specialization State of the art reviews of this rapidly expanding area of scholarship are therefore collected under one cover for the first time In this way a wide variety of readers who might otherwise rarely cross professional paths with one another can quickly learn about alternative preferences agendas and methods as well as novel research results interpretations and practical applications Designed to contain broad deep and current perspectives on compensation this volume continues the processes of explicating the concept of compensation linking and distinguishing compensation from neighboring concepts describing the variety of compensatory mechanisms operating in a wide range of phenomena and illustrating how compensatory mechanisms can be harnessed or trained to manage losses or deficits and to promote gains or at least maintenance of functioning
