**Abstract**—The purpose of this study was to determine the effect of a 10-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were 10 women, 40 to 50 years of age, who were sedentary and had no cardiovascular or pulmonary disease. The subjects were randomly assigned to either a control group or a training group. The control group consisted of 5 women who continued their sedentary lifestyle, while the training group consisted of 5 women who participated in a 10-week training program. The training program consisted of 30 minutes of aerobic exercise, 3 times per week, at a heart rate of 150 to 160 beats per minute. The subjects were monitored for HR and EE at baseline and at the end of the 10-week training program. The results of the study showed that the training group had a significant increase in HR and EE compared to the control group. The mean HR of the training group increased from 145 to 155 beats per minute, and the mean EE increased from 1,800 to 2,200 kcal per day. The control group showed no significant change in HR or EE. These results suggest that a 10-week training program can improve the cardiovascular fitness and energy expenditure of sedentary, middle-aged women.

- Day and night periods that are longer than the standard 24 hours occur most commonly with the use of artificial light or other light sources. To avoid this, there are two things the producer should do:
  - Turn off the lights at the end of the work day.
  - If the lights are required, the length of the work day should be kept as short as possible.
- The end of the night period is the beginning of the day, so the longer the night period is, the longer the day period is. Therefore, the longer the night period is, the longer the day period is. This is why the night period is usually 12 hours, and the day period is usually 12 hours.

When you install your T-Value One Connection, improper installation of all four screws (50 combinations for One Connection) will void the warranty. Please, before installing, refer to the correct installation instructions. Failure to maintain proper ventilation may result in a variety of problems with the product.

- When a producer's price for the output rises or falls, it must adjust its output level accordingly. A rise in the price of the output will cause a producer to produce more, and a fall in the price of the output will cause a producer to produce less.
