StarBriefs 2001, 2012-12-06 This compilation probably looks like one of the craziest things a human being could spend his or her time on Yet nobody would wonder at someone taking a short walk every day after twenty five years that person would have covered a surprisingly long distance This is exactly the story behind this list which appeared first as a few pages within the directory StarGuides or whatever name it had at that time and as a distinct sister publication since 1990 The idea behind this dictionary is to offer astronomers and related space scientists practical assistance in decoding the numerous abbreviations acronyms contractions and symbols which they might encounter in all aspects of the vast range of their professional activities including traveling Perhaps it is a bit paradoxical but if scientists quickly grasp the meaning of an acronym solely in their own specific discipline they will probably encounter more difficulties when dealing with adjacent fields It is for this purpose that this dictionary might be most often used Scientists might also refer to this compilation in order to avoid identifying a project by an acronym which already has too many meanings or confused definitions

Aerodynamics for Engineering Students Steven H. Collicott, Daniel T. Valentine, E. L. Houghton, P. W. Carpenter, 2016-08-12 Aerodynamics for Engineering Students Seventh Edition is one of the world's leading course texts on aerodynamics It provides concise explanations of basic concepts combined with an excellent introduction to aerodynamic theory This updated edition has been revised with improved pedagogy and reorganized content to facilitate student learning and includes new or expanded coverage in several important areas such as hypersonic flow UAV's and computational fluid dynamics Provides contemporary applications and examples that help students see the link between everyday physical examples of aerodynamics and the application of aerodynamic principles to aerodynamic design Contains MATLAB based computational exercises throughout giving students practice in using industry standard computational tools Includes examples in SI and Imperial units reflecting the fact that the aerospace industry uses both systems of units Improved pedagogy including more examples and end of chapter problems and additional and updated MATLAB codes
