## *Power steering*

Steering, turning, parking are made almost effortless with Cadillac Power Steering. Your car will respond to the slightest touch of the steering wheel with power assist available as required by road conditions.

Your Cadillac Power Steering may be manually operated with no power assist with the ignition in the "OFF" position. If your Power Steering becomes inoperative for any reason, the car may be steered manually with increased effort.

## *Cruise control*

Cadillac Cruise Control has two uses; it provides a warning back pressure on the accelerator pedal to serve as a speed reminder or, locked in, it serves as an automatic car speed regulator. The control knob for both functions is located in the instrument panel above the headlight switch.

To use as a speed reminder, drive the car at desired speed and turn the knob to the left until a back pressure is felt at the accelerator pedal. The Cruise Control will furnish the back pressure at this car speed until the setting is changed.

For automatic speed control, pull out the control knob momentarily when the back pressure is felt at the accelerator pedal. The car will now maintain the indicated speed up hill or down with the driver's foot off the accelerator pedal. Car speed can be changed by turning the knob to the left to decrease or to the right to increase speed. Turn the knob slowly to avoid sudden acceleration.

Automatic control is disengaged when the brake pedal is depressed, the transmission lever moved to "Neutral", or the ignition switch turned off. It can be re-engaged by momentarily pulling out on the knob when the back pressure is felt at the selected speed. The unit can be made inoperative by canceling with the brake pedal and turning the control knob full right to the "OFF" position.

Cruise Control does not interfere with normal acceleration up to the selected speed reminder setting. Above that speed, further acceleration is easily obtained by pressing the accelerator pedal against the warning back pressure.
