Human Performance in Automated and

Autonomous Systems Mustapha Mouloua, Peter A. Hancock, 2019-09-19 This book examines recent advances in theories, models, and methods relevant to automated and autonomous systems. The following chapters provide perspectives on modern autonomous systems such as self-driving cars and unmanned aerial systems directly from the professionals working with and studying them. Current theories surrounding topics such as vigilance, trust, and fatigue are examined throughout as predictors of human performance in the operation of automated systems. The challenges related to attention and effort in autonomous vehicles described within give credence to still-developing methods of training and selecting operators of such unmanned systems. The book further recognizes the need for human-centered approaches to design a carefully crafted automated technology that places the human user in the center of that design process. Features: Combines scientific theories with real-world applications where automated technologies are implemented. Disseminates new understanding as to how automation is now transitioning to autonomy. Highlights the role of individual and team characteristics in the piloting of unmanned systems and how models of human performance are applied in system design. Discusses methods for selecting and training individuals to succeed in an age of increasingly complex human-machine systems. Provides explicit benchmark comparisons of progress across the last few decades and identifies future prognostications and the constraints that impinge upon these lines of progress. Human Performance in Automated and Autonomous Systems: Current Theory and Methods illustrates the modern scientific theories and methods to be applied in real-world automated technologies. **Vehicle Performance** J.P.

Pauwelussen, 1999-01-01 Focusing on driver assessment, the relationships between vehicle control and human judgement, and on design sensitivity analysis, this book provides both broad and in-depth outlines in the general field of human judgement of vehicle handling performance. **Human Performance, Workload, and Situational Awareness Measures Handbook, Third Edition - 2-Volume Set** Valerie Jane Gawron, 2019-12-17 This two-volume set was developed to help researchers and practitioners select measures to be used in the evaluation of human-machine systems. It can also be used to supplement classes at both the undergraduate and graduate courses in ergonomics, experimental psychology, human factors, human performance measurement, and system test and evaluation. Volume 1 of the handbook begins with an overview of the steps involved in developing a test to measure human performance workload and/or situational awareness. This is followed by a definition of human performance and a review of human performance measures. Situational Awareness is similarly treated in a subsequent chapter. Volume 2 presents a definition of workload and a review of workload measures. Provides a short engineering tutorial on experimental design. Offers readily accessible information on human performance workload and situational awareness (SA) measures. Presents general description of the measure. Covers data collection, reduction, and analysis requirements. Details out the strengths and limitations or restrictions of each measure, including any known proprietary rights or restrictions, as well as validity and reliability data. **Progress in Computer Gaming and Esports: Neurocognitive and Motor Perspectives** Mark J.
