equal loudness contour	a curve plotting the SPLs of sounds at different frequencies that produce a loudness match with a reference sound at a fixed frequency and SPL
excitation pattern model	a theory of loudness perception in which the loudness of a sound is proportional to the summed neural activity it evokes in the auditory nerve
pitch	the perceptual attribute of a sounds that relates to its frequency
masking	an experimental effect in which a subject's ability to detect a sound signal is impaired in the presence of noise
band pass noise	a sound stimulus containing equal energy within a certain band of frequencies above and below its center frequency
critical band masking	an experimental effect in which masking of a sinusoidal signal occurs only when the center frequency of the noise falls within a certain band of frequencies surrounding the signal
place theory	a theory of pitch perception, according to which pitch is determined by the place of maximum excitation on the basilar membrane
timing theory	a theory of pitch perception, according to which pitch is determined by the timing of neural impulses in the auditory nerve
missing fundamental wave	a complex wave from which the fundamental frequency has been removed
beat	regular changes in the amplitude of a wave when two or more sine waves at different frequencies are added together
residue pitch	the pitch heard in a complex wave as a result of beats rather than resolvable harmonic components
pattern theory	a theory in complex sounds, according to which pitch is determined by the harmonic series that best fits the pattern of frequencies in a sound
minimum audible angle (MAA)	the smallest change in the azimuth angle of a sound source that can be detected reliably
duplex theory	a theory of auditory localization in which low frequency sounds are localized using interaural time differences, and high frequency sounds are localized using interaural intensity differences
cone of confusion	a cone of space extended from a listener's head, defining the directions that produce the same interaural time difference and are therefore confusable
precedence effect	a phenomenon in which apparent sound source direction is determined by the earliest sound to arrive at the ear
formant frequency	the distinctive frequency at which the vocal tract (tube of air between larynx and lips) vibrates to create a certain vowel sound
speech mode	a mode of auditory processing that is specialized for processing speech sounds
categorical perception	each stimulus is perceived as a member of a discrete category, in an all-or-nothing fashion, rather than as a value along a continuous dimension
phoneme boundary	a format frequency defining the boundary at which perception switches from one phoneme to another
Wernicke's area	an area in the left hemisphere of the human cortex where damage results in disordered speech perception (aphasia)
conductive hearing loss	deafness caused by impaired conduction of sound energy by the outer and middle ear
